Manage Scans

VM Scans - `/api/2.0/fo/scan/`
Compliance Scans - `/api/2.0/fo/scan/compliance/`
SCAP Scans - `/api/2.0/fo/scan/scap/`

List Scans: (GET + POST)

```
action={list}&
echo_request={0|1}&
scan_ref={value}&
state={Running|Paused|Canceled|Finished|
Error|Queued|Loading}&
processed={0|1}
type={On-Demand|Scheduled|API}&
target={ip,range...}&
user_login={login}&
launched_after_datetime={date/time}&
launched_before_datetime={date/time}&
show_aggs={0|1}&
show_op={0|1}&
show_status={0|1}&
show_last={0|1}&
pci_only={0|1}&
ignore_target={0|1}&
```

Manage Scans: (POST)

```
action={cancel|pause|resume}&
echo_request={0|1}&
scan_ref={value}&
```

Download Scan Results: (GET + POST)

```
action={fetch}&
echo_request={0|1}&
scan_ref={value}&
*ips={ip,range...}&
*mode={brief|extended}&
*output_format={csv|json}&
```

Notes: * means VM scan only

Share PCI Scan: (GET + POST)

```
action={share|status}& *POST for share
echo_request={0|1}&
scan_ref={value}&
merchant_username={value}&
```

Launch Scan

VM Scan - `/api/2.0/fo/scan/`
Compliance Scan - `/api/2.0/fo/scan/compliance/`

Launch Scan: (POST)

```
action={launch}&
echo_request={0|1}&
scan_ref={value}&
scan_title={value}&
target_from={assets|tags}&
ip={value}&
asset_groups={value}&
asset_group_ids={value}&

option_title={value}&
option_id={value}&
priority={value}& (0-9) *default is 0
runtime_http_header={value}&
connector_name={value}& *for EC2 scan
ec2_endpoint={value}& *for EC2 scan
ip_network_id={id}&
```

Scheduled Scans

API v2 guide

VM Scans - /api/2.0/fo/schedule/scan/

List Scheduled Scans: (GET)

action={list}&
echo_request={0|1}&
id={value}&
active={0|1}&
show_notifications={0|1}&

Create Scheduled Scan: (POST)

action={create}&
echo_request={0|1}&
scan_title={value}&
active={0|1}&
option_title={value}&
option_id={value}&
iscanner_id={value1,value2...}&
iscanner_name={value1,value2...}&
ip={value}&
asset_groups={value}&
asset_group_ids={value}&
default_scanner={0|1}&
scanners_in_ag={0|1}&
scanners_in_tagset={0|1}&
exclude_ip_per_scan={value}&
ip_network_id={id}&
runtime_http_header={value}&
target_from={assets|tags}&
tag_include_selector={all|any}&
tag_exclude_selector={all|any}&
tag_set_by={id|name}&
tag_set_include={value}&
tag_set_exclude={value}&
use_ip_nt_range_tags={0|1}&
connector_name={value}& *for EC2 scan
connector_uuid={value}& *for EC2 scan
ec2_endpoint={value}& *for EC2 scan
ec2_only_classic={value}& *for EC2 scan
occurrence={daily|weekly|monthly}&
frequency_days={value}& (1-365)
frequency_weeks={value}& (1-52)
weekdays={sunday|monday|tuesday|wednesday|thursday|friday|saturday}&
frequency_months={value}& (1-12)
day_of_month={value}& (1-31)
day_of_week={value}& (0-6, where 0 is sunday)
week_of_month={first|second|third|fourth|la

st}&
start_date={date}&
start_hour={value}& (0-23)
start_minute={value}& (0-59)
time_zone_code={value}&
observe_dst={yes|no}&
recurrence={value}&
end_after={value}& (0-119)
end_after_mins={value}& (0-59)
pause_after_hours={value}& (1-119)
pause_after_mins={value}& (0-59)
resume_in_days={value}& (1-9)
resume_in_hours={value}& (0-23)

Notes: “end_after_mins” must be specified with “end_after”. “pause_after_mins” must be specified with “pause_after_hours”. “resume_in_hours” must be specified with “pause_after_hours” and “resume_in_days”.

before_notify={0|1}&
before_notify_unit={days|hours|minutes}&
before_notify_time={value}&
before_notify_message={value}&
after_notify={0|1}&
after_notify_message={value}&
recipient_group_ids={value}&

Notes: “before_notify_time” must be specified with before_notify=1. “before_notify_message” is only valid when before_notify=1. “after_notify_message” is only valid when after_notify=1. “recipient_group_ids” is only valid when before_notify=1 or after_notify=1 is also specified.

Update Scheduled Scan: (POST)

action={update}&
id={value}&
echo_request={0|1}&
set_start_time={0|1}&

Notes:

For updating the start time, these must be specified together: set_start_time=1, start_date, start_hour, start_minute, time_zone_code, observe_dst.

For Daily Scan, these must be specified together: occurrence=daily, frequency_days.

For Weekly Scan, these must be specified together: occurrence=weekly, frequency_weeks, weekdays.

For Monthly Scan, these must be specified together: occurrence=monthly, frequency_months and day_of_month (for Nth day of month) or day_of_week, week_of_month (for Day in Nth week).

Delete Scheduled Scan: (POST)

action={delete}&
id={value}&
echo_request={Q|1}&

Authentication

API v2 guide

Authentication Record List

/api/2.0/fo/auth/

List Records (all types): (GET + POST)

action={list}&
echo_request={Q|1}&
title={value}&
comments={value}&
ids={id,range...}&
id_min={id}&
id_max={id}&

Authentication Record by Type List

/api/2.0/fo/auth/{type}/

where {type} is one of: unix, windows, oracle, oracle_listener, snmp, ms_sql, ibm_db2, vmware, http, apache, ms_iis, ibm_websphere, mysql, tomcat, oracle_weblogic, mongodb, palo_alto_firewall

List Records by Type: (GET + POST)

action={list}&

Notes: Same optional parameters as for authentication records list (all types) plus: details={Basic|All|None}&

Authentication Records

/api/2.0/fo/auth/<type>/

where <type> is one of: unix (for Unix, Cisco, Checkpoint Firewall), windows, oracle, oracle_listener, snmp, vmware, apache, ms_iis, ibm_websphere, http, mysql, ms_sql, docker, postgresql, sybase, tomcat, mongodb, palo_alto_firewall

Manage Records: (GET + POST)

action={create|update|delete}&
title={value}&
ids={id,range...}&
echo_request={Q|1}&

Notes: “title” is required for a create request. “ids” is required for an update and delete request.
comments={value}&
{target hosts} (*requirements below)
{<type> credentials} (*requirements per record)

Notes: Comments, target hosts, and credentials specified for create and update requests only (not delete requests).

{target hosts}:

ips={ip,range...}&
add_ips={ip,range...}&
remove_ips={ip,range...}&
network_id={value}&

Notes: “ips” is required for a create request (except Windows), optional for an update request. “add_ips” and “remove_ips” are for an update request only.

{vault definition}:

login_type={basic|vault}& /set to vault to enable
vault_id={value}&
vault_type={value}&

(vault parameters below are required except as indicated, * means optional)

Cyber-Ark PIM Suite

folder={value}&
file={value}&

Cyber-Ark AIM

folder={value}&
file={value}&

Thycotic Secret Server

secret_name={value}&

Quest Vault

system_name={value}&

CA Access Control

end_point_name={value}&
end_point_type={value}&
end_point_container={value}&

Lieberman ERPm

auto_discover_system_name={value}&
system_name_single_host={value}&
system_type={auto|windows|unix|oracle|mssql|ldap|system|custom}&
*custom_system_type={value}&
*valid when system_type=custom

BeyondTrust PBPS

*system_type={value}&
*account_name={value}&

{Unix record}:

Login credentials:

username={value}&
password={value}&
login_type={basic|vault}& (**vault definition**)

vault_type={CA Access Control|Cyber-Ark PIM Suite|Cyber-Ark AIM|Hitachi ID PAM|Lieberman ERPm|Quest Vault|Thycotic Secret Server|BeyondTrust PBPS}&
cleartext_password={Q|1}&
skip_password={Q|1}&
{XML File}&

Notes: Required for create request: “username”, “password” if cleartext_password=1. {XML File} defines private key certificates and root delegations.

Scanning:

port={value}& /PC scans only
use_agentless_tracking={Q|1}&
agentless_tracking_path={value}&

Notes: If use_agentless_tracking=1, “agentless_tracking_path” is required.

{Unix subtype record}:

sub_type={cisco|checkpoint_firewall}&

Login credentials:

username={value}&
password={value}&
login_type={basic|vault}& (**vault definition**)
vault_type={Cyber-Ark PIM Suite|Cyber-Ark AIM}&
cleartext_password={Q|1}&
enable_password={value}& (Cisco only)
expert_password={value}& (Checkpoint only)

Notes: Required for create request: “username”, “password” if cleartext_password=1.

Scanning:

port={value}& /PC scans only

{Windows record}:

Login credentials:

username={value}&
password={value}&
login_type={basic|vault}& (vault definition)
windows_domain={value}&
windows_ad_domain={value}&
ntlm={0|1}&
kerberos={0|1}&
ntlmv2={0|1}&
ntlm={0|1}&
require_smb_signing={0|1}&
minimum_smb_version={value}&

Scanning:

use_agentless_tracking={0|1}&

{Oracle record}:

Login credentials:

username={value}&
password={value}&
sid={value}&
servicename={value}&
port={num}&
pc_only={0|1}& /PC scans only

OS-dependent compliance checks:

perform_windows_os_checks={0|1}&
win_ora_home_name={value}&
win_ora_home_path={value}&
win_init_ora_path={value}&
win_spfile_ora_path={value}&
win_listener_ora_path={value}&
win_sqlnet_ora_path={value}&
win_tnsnames_ora_path={value}&
perform_unix_os_checks={0|1}&
perform_unix_opatch_checks={0|1}&
unix_ora_home_path={value}&
unix_init_ora_path={value}&
unix_spfile_ora_path={value}&
unix_listener_ora_path={value}&
unix_sqlnet_ora_path={value}&
unix_tnsnames_ora_path={value}&
unix_invptrloc={value}&

{Oracle Listener record}:

password={value}&

{IBM DB2 record}:

Login credentials:

username={value}&
password={value}&

database={value}&
port={value}&
pc_only={0|1}& /PC scans only

OS-dependent compliance checks:

win_db2dir={value}
win_prilogfile={value}
win_seclogfile={value}
win_terlogfile={value}
win_mirlogfile={value}
unix_db2dir={value}
unix_prilogfile={value}
unix_seclogfile={value}
unix_terlogfile={value}
unix_mirlogfile={value}

Notes: All check parameters are required if you want OS-dependent compliance checks to be run.

{MySQL record}:

username={value}&
password={value}&
database={value}&
port={value}&
windows_config_file={value}&
unix_config_file={value}&
ssl_verify={value}&
hosts={value}&
client_cert={value}&
client_key={value}&
kerberos={0|1}&
ntlmv2={0|1}&
ntlm={0|1}&
member_domain={value}& or ips={value}&

Notes: All parameters are required for create request, except client_cert and client_key (which must be specified together).

{SNMP record}:

version={v1|v2c|v3}&

SNMPv1 and SNMPv2c:

community_strings={value,value...}&

Notes: "community_strings" is optional for create and update requests.

SNMPv3:

username={value}&
password={value}&
auth_alg={MD5|SHA1}&
encrypt_password={value}&
priv_alg={DES|AES}&
security_engine_id={value}&

```
context_engine_id={value}&  
context={value}&
```

Notes: All SNMPv3 parameters are optional. However, when one is specified, others are required as follows. 1) It is required that “username”, “password” and “auth_alg” are all defined for record. 2) It is required that “encrypt_password” and “priv_alg” are all defined for record. 3) For an update request “auth_alg” and “priv_alg” may be set to empty, in which case the data is not encrypted.

{VMware record}:

```
username={value}&  
password={value}&  
port={value}&  
hosts={value}&  
ssl_verify={all|skip|none}&
```

Notes: “username” and “password” are required for a create request, optional for an update request.

{Apache Web Server record}:

```
unix_apache_config_file={value}&  
unix_apache_control_command={value}&
```

{IBM WebSphere App Server record}:

```
unix_install_dir={value}&
```

{Tomcat Server record}:

```
installation_path={value}&  
instance_path={value}&  
auto_discover_instances={0|1}&  
installation_path_windows={value}&  
instance_path_windows={value}&  
service_name={value}
```

Notes: “installation_path” or “installation_path_windows” is required for a create request.

{HTTP record}:

```
username={value}&  
password={value}&  
vhost={value}&  
realm={value}&  
ssl={0|1}&
```

Notes: “vhost” or “realm” is required for a create request. “ips” parameter is not valid for this record type.

{MongoDB record}:

```
unix_conf_file={value}&  
database_name={value}&  
port={value}&  
ssl_verify={0|1}&  
hosts={value}&  
login_type={basic|vault|pkcert}& (vault definition)  
username={value}&  
password={value}&  
vault_type={BeyondTrust PBPS | CA Access Control | Cyber-Ark PIM Suite| Cyber-Ark AIM |Quest Vault | Thycotic Secret Server}&  
vault_id={value}&  
private_key={value}&  
private_key_vault_id={value}&  
passphrase={value}&  
certificate={value}&
```

Notes: Required for create request when login_type=basic: “username” and “password”. Required for create request when login_type=vault: “username”, “vault_type” and “vault_id”. Required for create request when login_type=pkcert: “private_key” and “passphrase” (when passphrase_vault_id is not specified.) “hosts” required if ssl_verify=1.

{Palo Alto Networks Firewall record}:

username={value}&
password={value}&
login_type=vault& (**vault definition**)
vault_id={value}&
vault_type={Cyber-Ark PIM Suite | Cyber-Ark
AIM | Quest Vault | Thycotic Secret Server |
BeyondTrust PBPS}&

Notes: “password” or “login_type=vault” is
required for create request.

PC scans only

{Docker record}:

(PC scans only)

docker_daemon_conf_file={value}
docker_command={value}

{MS SQL record}:

(PC scans only)

username={value}&
password={value}&
port={value}&
db_local={0|1}&
windows_domain={value}&

Notes: When “db_local” is unspecified for a create
request, the flag is set to 1 (MS SQL Server
credentials). “windows_domain” is required when
“db_local=0”, otherwise it is invalid.

instance={value}& default is “MSSQLSERVER”
- or - **auto_discover_instances**={0|1}&
database={value}& default is “master”
- or - **auto_discover_databases**={0|1}&
port={value}&
- or - **auto_discover_ports**={0|1}&

{Oracle WebLogic Server record}:

(PC scans only)

installation_path={value}&
auto_discover={0|1}&
domain={value}&

{PostgreSQL record}:

(PC scans only)

pgsql_unix_conf_file={value}&
username={value}&
password={value}&
login_type={basic|vault}& (**vault definition**)
vault_type={CA Access Control|Cyber-Ark PIM
Suite|Cyber-Ark AIM |Hitachi ID PAM|Quest
Vault|Thycotic Secret Server|BeyondTrust
PBPS}

pgsql_db_name={value}&
port={value}&
ssl_verify={0|1}&
hosts={value}&
client_key_type={basic|vault}&
client_key={value}&
client_key_vault_type={Cyber-Ark
AIM|BeyondTrust PBPS}&
client_key_vault_id={value}&
passphrase_type={basic|vault}&
passphrase={value}&
client_cert={value}&
passphrase_vault_type={CA Access
Control|Cyber-Ark PIM Suite|Cyber-Ark AIM
|Hitachi ID PAM|Quest Vault|Thycotic Secret
Server|BeyondTrust PBPS}&
passphrase_vault_id={value}&

Notes: Required for create request: “password” if
login_type=basic.

{Sybase record}:

(PC scans only)

username={value}&
password={value}&
login_type={basic|vault}& (**vault definition**)
vault_type={Cyber-Ark PIM Suite|Cyber-Ark
AIM |Quest Vault|Thycotic Secret Server|
Lieberman ERPM}
port={value}&
database={value}&
install_dir={value}&

Notes: Required for a create request: “password” if
login_type=basic, “install_dir” if record will be
used for scanning Unix hosts.

Authentication Vaults **API v2 guide**

/api/2.0/fo/vault/

List Vaults: (GET + POST)

action={list}&
echo_request={0|1}&
title={value}&
type={Cyber-Ark PIM Suite|Thycotic Secret Server|Quest Vault|CA Access Control|Hitachi ID PAM|Lieberman ERPM|Cyber-Ark AIM|BeyondTrust PBPS}&
modified={date/time}&
orderby={id|title|system_name|last_modified|last_modified_by}&
sortorder={asc|desc}&
limit={value}&
offset={value}&

Notes: “sortorder” is valid only when “orderby” is specified. “limit” and “offset” must be specified together.

Manage Vaults: (GET + POST)

action={create|update|delete}&
title={value}&
type={Cyber-Ark PIM Suite|Thycotic Secret Server|Quest Vault|CA Access Control|Hitachi ID PAM|Lieberman ERPM|BeyondTrust PBPS}
id={id}&
comments={value}&
echo_request={0|1}&
{settings}

Notes: “title” and “type” are required for a create request, optional for an update request. “comments” is optional for create and update request. “id” is required for an update and delete request. “settings” for create and update request, varies per vault type (see below).

CA Access Control:

ca_url={value}&*
ca_api_username={value}&*
ca_ssl_verify={1|0}&*
ca_web_username={value}&
ca_web_password={value}&

Notes: bold means required for new vault

Cyber-Ark PIM Suite:

Scanner Appliances

API v2 guide

/api/2.0/fo/appliance/

List Appliances: (GET + POST)

```
action={list}&
echo_request={Q|1}&
output_mode={brief|full}&
scan_detail={Q|1}&
include_cloud_info={Q|1}&
busy={0|1}&
scan_ref={value}&
name={value}&
ids={id1,id2...}&
include_license_info={Q|1}&
network_id={id}&
type={physical|virtual|offline}&
show_tags={0|1}&
```

Notes: “include_license_info” applies to virtual scanner appliances

Virtual Scanners: (GET + POST)

```
echo_request={Q|1}&
-----
action={create}&
name={value}&
asset_group_id={value}&
polling_interval={60-360}& *default is 180
```

Notes: “asset_group_id” is required for Unit Managers and Scanners with permission to create virtual scanners. Managers do not specify “asset_group_id”.

```
-----
action={update}&
id={id}&
name={value}&
comment={value}&
polling_interval={60-360}&
set_tags= {value}&
add_tags= {value}&
remove_tags= {value}&
tag_set_by= {id|name}&
*set_vlans={ID|IP_ADDRESS|NETMASK|NAME}&
*set_routes={IP_ADDRESS|NETMASK|GATEWAY|NAME}&
```

*Notes: Or “ (empty string) to delete all records

```
action={delete}&
id={id}&
```

Physical Scanners: (POST)

/api/2.0/fo/appliance/physical/

```
action={update}&
id={id}&
name={string}&
polling_interval={60-360}& *default is 180
set_vlans={value}&
set_tags= {value}&
add_tags= {value}&
remove_tags= {value}&
tag_set_by= {id|name}&
set_routes={value}&
comment={value}&
```

Assign Appliance to Network: (POST)

```
action={assign_network_id}&
appliance_id={id}&
network_id={id}&
echo_request={Q|1}&
```

Assign Appliance to Network: (POST)

/api/2.0/fo/appliance/replace_iscanner/

```
action={replace}&
echo_request={Q|1}&
old_scanner_name={value}&
new_scanner_name={value}&
do_not_copy_settings={Q|1}&
do_not_remove_new_scanner_from_objects={Q|1}&
```

Option Profiles

API v2 guide

/api/2.0/fo/subscription/option_profile/

Export Option Profile: (POST)

/api/2.0/fo/subscription/option_profile/

```
action={export}&
output_format={XML}&
option_profile_id={value}&
option_profile_title={value}&
option_profile_type={user|compliance|pci}&
```

Import Option Profile: (POST)

/api/2.0/fo/subscription/option_profile/

```
action={import}&
```

Notes: When calling this API the user needs to pass the proper XML with Content-Type XML.

KnowledgeBase

API v2 guide

Vulnerabilities

/api/2.0/fo/knowledge_base/vuln/

List Vulnerabilities: (GET + POST)

```
action={list}&
echo_request={0|1}&
details={Basic|All|None}&
ids={value}&
id_min={value}&
id_max={value}&
is_patchable={0|1}&
last_modified_after={date/time}&
last_modified_before={date/time}&
last_modified_by_user_after={date/time}&
last_modified_by_user_before={date/time}&
last_modified_by_service_after={date/time}&

Cloud Agent API

Use these API calls to manage, activate, and configure your cloud agents.

[Agent Management](#) | [Activation Key](#) | [Configuration Profile](#)

Looking for more information? No problem. Click

[CA API guide](#) for [Qualys Cloud Agent API User Guide](#)

Agent Management CA API guide

Current agent count

/qps/rest/2.0/count/am/hostasset (POST)

Filters (optional):

id (Long)
name (String)
created (Date)
updated (Date)
tagName (String) /Cloud Agent

Notes: To get a count of agents installed, nothing other than the filter tagName EQUALS Cloud Agent is recommended. The more filters added to the request will result in a more refined count.

List agents

/qps/rest/2.0/search/am/hostasset (POST)

Required:

tagName (String) /Cloud Agent

Optional:

[Click here](#) for AM and Tagging API User Guide

Activate a single agent

/qps/rest/2.0/activate/am/asset/<id>?module=<value>,<value>(POST)

*see module parameter values

Activate agents in bulk

/qps/rest/2.0/activate/am/asset?module=<value>,<value> (POST)

*see module parameter values

Filters (optional):

id (Long)
name (String)
created (Date)
updated (Date)
tagName (String) /Cloud Agent

Notes: To activate all agents installed, nothing other than the filter tagName EQUALS Cloud Agent is recommended. The more filters added to the request we'll activate a more refined list of agents.

Deactivate a single agent

/qps/rest/2.0/deactivate/am/asset/<id>?module=<value>,<value> (POST)

*see module parameter values

Deactivate agents in bulk

/qps/rest/2.0/deactivate/am/asset?module=<value>,<value> (POST)

*see module parameter values

Filters (optional):

id (Long)
name (String)
created (Date)
updated (Date)
tagName (String) /Cloud Agent

Notes: To deactivate all agents installed, nothing other than the filter tagName EQUALS Cloud Agent is recommended. The more filters added to the request we'll deactivate a more refined list of agents.

*module parameter values

These values are supported:

AGENT_VM - for VM module

AGENT_PC - for PC module

AGENT_FIM - for FIM module

AGENT_IOC - for IOC module

Uninstall a single agent

/qps/rest/2.0/uninstall/am/asset/<id> (POST)

Uninstall agents in bulk

/qps/rest/2.0/uninstall/am/asset (POST)

Filters (optional):

id (Long)
name (String)
created (Date)
updated (Date)
tagName (String) /Cloud Agent

Notes: The use of NOT EQUALS operator is not supported during agent uninstall. This is to avoid unintended consequences of Tags and Assets being deleted or updated.

Activation Key

CA API guide

Get a single activation key

/qps/rest/1.0/get/ca/agentactkey/<id> (GET)

Search activation keys

/qps/rest/1.0/search/ca/agentactkey/ (POST)

Filters (optional):

type (string)
countPurchased (Integer)
expireDate (Date)
modules (string)
tags (string)
isDisabled (boolean)

Create an activation key

/qps/rest/1.0/create/ca/agentactkey/ (POST)

Filters (optional):

type (string)
countPurchased (Integer)
expireDate (Date)
modules (string)
tags (string)

Delete an activation key

/qps/rest/1.0/delete/ca/agentactkey/<id> (POST)

Update an activation key

/qps/rest/1.0/update/ca/agentactkey/<id> (POST)

Filters (optional):

id (Integer)
type (string)
countPurchased (Integer)
expireDate (Date)
modules (string)
tags (string)
isDisabled (boolean)
applyOnAgents (boolean)

Configuration Profile

CA API guide

Get a single configuration profile

/qps/rest/1.0/get/ca/agentconfig/<id> (GET)

Search configuration profiles

/qps/rest/1.0/search/ca/agentconfig/ (POST)

Filters (optional):

name (string)
id (Integer)

Create a configuration profile

/qps/rest/1.0/create/ca/agentconfig/ (POST)

Filters (optional):

name (string)
description (string)
priority (Integer)
isDefault (Integer)
suspendScanning (boolean)
tags (string)
blackoutConfig (string)
performanceProfile (string)
id (Integer)

Delete a configuration profile

/qps/rest/1.0/delete/ca/agentconfig/<id> (POST)

Update a configuration profile

/qps/rest/1.0/update/ca/agentconfig/ (POST)

Filters (optional):

name (string)

description (string)

priority (Integer)

isDefault (Integer)

suspendScanning (boolean)

tags (string)

blackoutConfig (string)

performanceProfile (string)

id (Integer)

Asset Management & Tagging API

max_days_since_detection_updated={value}&  
*host_metadata={value}&  
host_metadata_fields={accountId|region|availabilityZone|instanceId|instanceType|imageId|kernelId}
```

Notes: 1) *include/exclude cannot be specified with “qids” or “severities” in same request. Search list titles and IDs cannot be included/excluded in the same request. “show_igs” is required if included search lists contain only Information Gathered.

2) A request with “max_days_since_vm_scan” cannot also include “vm_scan_since” or “no_vm_scan_since”. 3) A request with “max_days_since_detection_updated” cannot also include “detection_updated_since”.

4) host_metadata supports fetching only EC2 assets.

Excluded Hosts

Excluded Hosts List: (GET + POST)

/api/2.0/fo/asset/excluded_ip/

action={list}&
echo_request={Q1}&
ips={ip,range...}&
network_id={id}&

Filter by asset groups:

ag_ids={value}&
ag_titles={value}&

Notes: “ag_ids” and “ag_titles” are mutually exclusive and cannot be specified together.

Filter by asset tags:

use_tags={Q1}&
tag_include_selector={any|all} &
tag_exclude_selector={any|all}&
tag_set_by={id|name}&
tag_set_include={value}&
tag_set_exclude={value}&

Notes: “use_tags=1” must be specified with other tag filter parameters.

Excluded Hosts Change History: (GET + POST)

/api/2.0/fo/asset/excluded_ip/history/

action={list}&
echo_request={Q1}&
ips={ip,range...}&
ids={id,range...}&
id_min={id}&
id_max={id}&
network_id={id}&

Manage Excluded Hosts: (POST)

/api/2.0/fo/asset/excluded_ip/

action={add|remove|remove_all}&
echo_request={Q1}&
ips={ip,range...}&
comment={value}&
expiry_days={value}& (for action=add)
dg_names={value}& (for action=add)
network_id={value}&

Notes: “ips” is invalid for “remove_all”.

Virtual Host Assets

/api/2.0/fo/asset/vhost/

Virtual Host List: (GET + POST)

action={list}&
echo_request={Q1}&
ip={ip}&
port={port}&

Virtual Host: (POST)

action={create|update|delete|add_fqdn|delete_fqdn}&
echo_request={Q1}&
ip={ip}&
port={port}&
fqdn={fqdn}&

Notes: “fqdn” is invalid for “delete_fqdn”.

IPv6 Host Assets

/api/2.0/fo/asset/ip/v4_v6/

IPv6 Mapping Records List: (GET + POST)

action={list}&
echo_request={Q1}&
id_min={id}&
id_max={id}&
ipv4_filter={value}&
ipv6_network={value}&
output_format={csv|xml}&
truncation_limit={value}&

Notes: Subscription authorization is required.

Add IPv6 Mapping Records: (POST)

action={add}&
echo_request={Q1}&
csv_data={value}&
xml_data={value}&
all_or_nothing={0|1}&

Notes: Subscription authorization is required to use. “csv_data” or “xml_data” is required

Remove IPv6 Mapping Records: (POST)

action={remove}&
echo_request={Q1}&
csv_data={value}&
xml_data={value}&

Notes: Subscription authorization is required to use. “csv_data” or “xml_data” is required

Restricted IPs

/api/2.0/fo/setup/restricted_ips/

Manage Restricted IPs: (GET + POST)

action={list|activate|add|delete|replace|clear}&
&
echo_request={0|1}&
enable={0|1}&
ips={value} or CSV raw data upload&
output_format={CSV|XML}

Asset Data

API v1 guide

/qps/rest/2.0/update/waf/cluster (POST)

Optional:

name (Text)

description (Text)

errorResponse

errorResponse.block

errorResponse.redirect.url (Text)

errorResponse.redirect.status (Long)

errorResponse.customPage.id (Long)

errorResponse.customPage.uuid (UUID)

errorResponse.customPage.name (Text)

tags

trustedIPs.string (Text)

Delete cluster

/qps/rest/2.0/delete/waf/cluster/<id> (POST)

Required:

id (Integer) /cluster ID

Delete clusters (bulk)

/qps/rest/2.0/delete/waf/cluster (POST)

Filters (optional):

see [Search clusters](#)

Appliances

WAF API guide

Current appliance count

/qps/rest/2.0/count/waf/appliance (GET)

Get details on appliance

/qps/rest/2.0/get/waf/appliance/<id> (GET)

Required:

id (Integer) /appliance ID

Search appliances

/qps/rest/2.0/search/waf/appliance (POST)

Optional:

id (Long)

uuid (UUID)

name (Text)

hostname (Text)

lastPollDate

applianceCreated

applianceVersion (Text)

status (Long)

pollStatus

heartbeatGenerated

heartbeatProcessed

systemOs (Text)

systemRam (Long)

systemType (Text)

systemEc2InstanceId (Text)

systemEc2InstanceType (Text)

systemEc2AmiId (Text)

systemCpusCount (Long)

systemCpusCores (Long)

systemCpusSpeed (Float)

systemCpusModel (Text)

configRulesVersion (Text)

configVersion (Text)

configGenerated

ip (Text)

cluster.id (Long)

cluster.uuid (UUID)

cluster.name (Text)

Delete appliance

/qps/rest/2.0/delete/waf/appliance/<id> (POST)

Required:

id (Long) /appliance ID

Malware Detection API

Use these API calls to get information about malware detections.

Malware Detections

Looking for more information? No problem. Click

MD API guide for [Qualys Malware Detection API User Guide](#)

Malware Detections **MD API guide**

Current malware detections

/qps/rest/1.0/download/md/detection (POST)

Required:

format (csv|cef)

Filters (optional):

id (Integer)

qid (Integer)

url (Text)

type (Keyword ie BEHAVIORAL)

showDeactivatedSite (Boolean)

severity (Keyword i.e. HIGH)

Search malware detections

/qps/rest/1.0/search/md/detection (POST)

Filters:

id (Integer)

qid (Integer)

type (Keyword ie BEHAVIORAL)

showDeactivatedSite (Boolean)

severity (Keyword i.e. HIGH)

Get details on malware detection

/qps/rest/1.0/get/md/detection/<id> (GET, POST)

Required:

id (Integer) /malware detection ID

Security Assessment Questionnaire API

Use these API calls to manage SAQ users and templates.

[SAQ users](#) | [SAQ templates](#)

Looking for more information? No problem. Click

[SAQ API guide](#) for [Qualys Security Assessment Questionnaire API User Guide](#)

SAQ users

[SAQ API guide](#)

Current user count

`/qps/rest/1.0/count/saq/user/` (GET, POST)

Filters (optional):

id (Integer) /user ID
uuid (Integer)
firstName (Text)
lastName (Text)
company (Text)
title (Text)
emailAddress (Text)
userName (Text)
tags.tag.id (Text)
tags.tag.name (Text)

Get details on user

`/qps/rest/1.0/get/saq/user/ <id>` (GET)

Required:

id (Integer) /user ID

Search users

`/qps/rest/1.0/search/saq/user/` (POST)

Filters (optional):

id (Integer) /user ID
uuid (Integer)
firstName (Text)
lastName (Text)
company (Text)
title (Text)
emailAddress (Text)
userName (Text)
tags.tag.id (Integer)

tags.tag.name (Text)

Create user

`/qps/rest/1.0/create/saq/user/` (POST)

Required:

firstName (Text)
lastName (Text)
company (Text)
emailAddress (Text)

Optional:

title (Text)
tags (List)
tags.tag.id (Integer)
tags.tag.name (Text))

Update user

`/qps/rest/1.0/update/saq/user/<id>` (POST)

`/qps/rest/1.0/update/saq/user/` (POST)

Required to update single user:

id (Integer) /user ID

Optional:

firstName (Text)
lastName (Text)
company (Text)
emailAddress (Text)
title (Text)
tags (List)
tags.tag.id (Integer)
tags.tag.name (Text))

Optional for bulk update:

id (Integer)
uuid (Integer)

Delete user

`/qps/rest/1.0/delete/saq/user/<id>` (POST)

Required:

id (Long) /user ID

Delete users (bulk)

`/qps/rest/1.0/delete/saq/user/` (POST)

Filters (optional):

see [Search users](#)

SAQ templates

SAQ API guide

Current library template count

/qps/rest/1.0/count/saq/librarytemplate/
(GET, POST)

Filters (optional):

id (Integer) /library template ID
uuid (Integer)
name (Text)
description (Text)
category (Text)
familyId (Integer)
revision (Integer)
isLibrary (Boolean)
questionCnt (Integer)
state (Text)

Get details on library template

/qps/rest/1.0/get/saq/librarytemplate/ <id> (GET)

Required:

id (Integer) /library template ID

Search library templates

/qps/rest/1.0/search/saq/librarytemplate/ (POST)

Filters (optional):

id (Long)
uuid (UUID)
name (Text)
description (Text)
category (Text)
familyId (Integer)
revision (Integer)
isLibrary (Boolean)
questionCnt (Integer)
state (Text)

Current template count

/qps/rest/1.0/count/saq/template/ (GET, POST)

Filters (optional):

id (Integer) /template ID
uuid (Integer)
name (Text)
description (Text)
category (Text)
familyId (Integer)

revision (Integer)
isLibrary (Boolean)
questionCnt (Integer)
state (Text)

Get details on template

/qps/rest/1.0/get/saq/template/ <id> (GET)

Required:

id (Integer) /template ID

Search templates

/qps/rest/1.0/search/saq/template/ (POST)

Filters (optional):

id (Integer) /template ID
uuid (Integer)
name (Text)
description (Text)
category (Text)
familyId (Integer)
revision (Integer)
isLibrary (Boolean)
questionCnt (Integer)
state (Text)

Create template from library

/qps/rest/1.0/createfromlibrary/saq/template/
(POST)

Required:

id (Integer) /library template ID

Create template

/qps/rest/1.0/create/saq/template/ (POST)

Several required and optional elements are supported

[Click here](#) for SAQ API User Guide

Update template

/qps/rest/1.0/update/saq/template/<id> (POST)

/qps/rest/1.0/update/saq/template/ (POST)

Required to update single template:

id (Integer) /library template ID

Several optional elements are supported

[Click here](#) for SAQ API User Guide

Create new version of existing template

/qps/rest/1.0/newversion/saq/template/<id>
(POST)

Required:

id (Long) /template ID

Publish template

/qps/rest/1.0/publish/saq/template/<id> (POST)

Required:

id (Long) /template ID

Delete template

/qps/rest/1.0/delete/saq/template/<id> (POST)

Required:

id (Long) /template ID

Delete template (bulk)

/qps/rest/1.0/delete/saq/template/ (POST)

Filters (optional):

see [Search library templates](#)

Portal version API

Find out the version of Portal and its sub-modules (in your subscription).

Portal version

`/qps/rest/portal/version` (GET)

Returns the version information based on the username supplied in the request.

API Server URL

What API Server URL to use

Qualys maintains multiple Qualys platforms. The Qualys API server URL that you should use for API requests depends on the platform where your account is located.

Qualys US Platform 1
<https://qualysapi.qualys.com>

Qualys US Platform 2
<https://qualysapi.qg2.apps.qualys.com>

Qualys US Platform 3
<https://qualysapi.qg3.apps.qualys.com>

Qualys EU Platform 1
<https://qualysapi.qualys.eu>

Qualys EU Platform 2
<https://qualysapi.qg2.apps.qualys.eu>

Qualys India Platform 1
<https://qualysapi.qg1.apps.qualys.in>

Qualys Private Cloud Platform
https://qualysapi.<customer_base_url>

Still need help?

You can easily find the API server URL to use. Just log in to your Qualys account.

Go to Help > About.

You'll see the API Server URL for your account under Security Operations Center (SOC).

General Information

Qualys Web Service	
Application Version:	8.9.0.2-2
Online Help Version:	8.9.29-1
SCAP Module Version:	1.2
Qualys External Scanners	
Security Operations Center (SOC):	64.39.96.0/20 (64.39.96.1-64.39.1
Scanner Version:	9.0.29-1
Vulnerability Signature Version:	2.3.492-2
Scanner Services	3.0.12-1
Qualys Scanner Appliances	
Security Operations Center (SOC):	- qualysguard.qualys.com:443
	- qualysapi.qualys.com:443
	- dist01.sjdc01.qualys.com:443
	- nochostr.sjdc01.qualys.com:443
	- scanservice1.qualys.com:443
	- all in 64.39.96.0/20

Good to Know

Notations

Required attributes are in bold. For example “**ref**={value}” indicates a required parameter.

Defaults are underlined. For example {0|1} indicates “0” is the default value for the Boolean attribute.

GET and POST

Functions support the GET method only, the POST method only or both GET and POST as indicated.

Date/Time

Date/time format is YYYY-MM-DD[THH:MM:SSZ] where time is optional.

API Notes

- 1 Authentication is performed using basic auth (using API v1 or APIv2) or session-based authentication (API v2 only) by the SSL socket connection.
- 2 There are known limits for the amount of data that can be sent using the GET method. These limits are dependent on the toolkit used. There is no fundamental limit with sending data using the POST method.
- 3 Variables and values must be URL-encoded.
- 4 Returned XML responses usually include numeric error codes.
- 5 UTF-8 encoding is used internally and for the returned XML.
- 6 Role-based privileges (Manager, Scanner, and Reader) apply to most API calls.
- 7 Blanks in “string type values” can be encoded as plus characters(+).

Curl Client

Use the **curl** client to issue API requests directly from the Linux Command Line.

Example using basic authentication (example uses Qualys US Platform 1):

```
curl -s -k -H 'X-Requested-With: curl demoapp' -u username:password 'https://{SERVER}.qualys.com/api/2.0/fo/scan/?action=list'
```

Example using session based authentication (example uses Qualys US Platform 1):

```
curl -s -k -H 'X-Requested-With: curl demoapp' -D headers.15 -b 'QualysSession=SESSION_ID; path=/api; secure' 'https://{SERVER}.qualys.com/api/2.0/fo/scan/?action=list'
```

See the **curl(1)** man page for further details.

Allowed Operators

Supported using the following APIs: Asset Management and Tagging, Cloud Agent, Continuous Monitoring, Malware Detection, Web Application Firewall, Web Application Scanning.

Allowed Operators

Integer	EQUALS, NOT EQUALS, GREATER, LESSER, IN
Text	CONTAINS, EQUALS, NOT EQUALS
Date	EQUALS, NOT EQUALS, GREATER, LESSER
Keyword	EQUALS, NOT EQUALS, IN
Boolean	(true/false) EQUALS, NOT EQUALS
