Qualys.

How to Build a Resilient Cybersecurity Program

A Continuous Security Intelligence Platform to Empower IT & Security Teams

Managing vulnerabilities in your complex, hybrid IT environment is no easy task. It seems you never have enough staff resources to detect problems, analyze the data, and apply necessary patches. Perhaps you lack the expertise to manage both cloud and on-premises vulnerabilities in parallel or to handle data reconciliation efficiently. Many organizations struggle under the weight of too many point solutions or integrations from detection to remediation. Others have too many software agents to deploy and run. Industry estimates are that 50% of the security risk that organizations face results from having too many security vendors and products. The result is a lack of holistic visibility into risks across your infrastructure and an inability to quickly respond to threats. The answer is not more tools, but less.

The answer is **Qualys**.

Why Qualys?

- Single agent, single platform
- Precise data, research & insights
- Security automation
- Rapid time to value
- Better decisions, made faster
- IT Ops + InfoSec teams more productive, resilient
- Trusted by 10,000+ customers in 130 countries, including the majority of the Forbes 100

Does this sound like you?

- ⊘ Using two or more solutions to manage vulnerabilities, patches, asset inventory, threat intelligence, and more in a hybrid environment

- ⊘ Must deploy, maintain and reconcile data from multiple software agents, without in-house expertise

- ⊘ Not enough skilled cybersecurity resources to manage data, hardware, software, and patches

- ⊘ Too much time and effort required to deploy more VM capabilities as you grow

- ⊘ Lack of alignment between the security team tasked with finding vulnerabilities and the IT Operations team responsible for patching them

Award Winning Solution

ALTERNATIVE SOLUTIONS	QUALYS	VALUE
IT responsible for all infrastructure and software	**100% cloud delivery**	Saves time & money
Full-time employees manage the vulnerability management database	**Qualys manages**	Saves resources
Agent proliferation needs data analysis and reconciliation	**Single cloud agent, single SaaS platform**	Reduces complexity
Vulnerability data requires analysis, risk profiling, and contextualization	**Actionable analysis provided automatically, no searching for necessary context**	Data is precise, contextual and actionable
Point solutions for every part of the security lifecycle fragments largely manual response	**Closed loop security automation aligns IT and InfoSec operations**	Proactively reduces risk; improves productivity and effectiveness
Additional capabilities needed require planning, implementation, services, etc.	**Rapid activation of any additional security capabilities under single Qualys license**	Consolidates siloed security stack

Inventory & Risk   **Threat Detection**   **Compliance**   **Vulnerability Management**   **Remediation**
