About this guide

Welcome to Qualys Consultant Scanner - Personal Edition! This lightweight and easy to install Scanner helps you scan your internal networks for security issues using the Qualys Cloud Platform.

About Qualys

Qualys, Inc. (NASDAQ: QLYS) is a pioneer and leading provider of cloud-based security and compliance solutions with over 9,200 customers in more than 100 countries, including a majority of each of the Forbes Global 100 and Fortune 100. The Qualys Cloud Platform and integrated suite of solutions help organizations simplify security operations and lower the cost of compliance by delivering critical security intelligence on demand and automating the full spectrum of auditing, compliance and protection for IT systems and web applications. Founded in 1999, Qualys has established strategic partnerships with leading managed service providers and consulting organizations including Accenture, BT, Cognizant Technology Solutions, Fujitsu, HCL Comnet, HPE, Infosys, NTT, Optiv, SecureWorks, Tata Communications, Verizon and Wipro. The company is also a founding member of the Cloud Security Alliance (CSA).

For more information, please visit www.qualys.com

Qualys Support

Qualys is committed to providing you with the most thorough support. Through online documentation, telephone help, and direct email support, Qualys ensures that your questions will be answered in the fastest time possible. We support you 7 days a week, 24 hours a day. Access support information at www.qualys.com/support/
Quick Start

Welcome to Qualys Consultant Scanner - Personal Edition! This lightweight Scanner Appliance is perfectly suited for consultants using the Qualys Cloud Platform to provide vulnerability and compliance services for their clients.

Scanner to take on the go!

- Super compact and lightweight
- Plug in any VGA monitor and access the built-in console
- Activate in minutes - DHCP is enabled by default
- Easily configure as needed - static IP, proxy, and more
- Bind/unbind with different subscriptions, unlimited times

What you’ll need

Consultant Scanner - Personal Edition packaging from Qualys.

Qualys Cloud Suite account with Consultant Scanner - Personal Edition enabled. Manager or Unit Manager role is required. Interested in Consultant Scanner - Personal Edition? Sure just reach out to Qualys Support or your Qualys Account Manager.

VGA monitor to connect to Qualys Consultant Scanner - Personal Edition.
USB keyboard to connect to Qualys Consultant Scanner - Personal Edition.

**Quick Look at the Scanner**

**Front panel**

The Scanner’s front panel gives you operational indicators.

1 - These LEDs tell you about the WAN interface which is disabled by default. When split network configuration is enabled for your scanner the left LED is lit (blinking) when there is WAN interface activity and the right LED is lit (solid) when the WAN interface is enabled.  
2 - These LEDs tell you about the LAN interface which is enabled. The left LED is lit (blinking) when there is LAN interface activity and the right LED is lit (solid) when the LAN interface is enabled.

**Disk** - This LED is lit (blinking) when there is disk activity.

**POWER** - This LED is lit (solid) when the scanner is powered on.

**Back panel**

The Scanner’s back panel includes: a power switch, a power socket, VGA socket, two USB ports, Ethernet LAN and WAN ports.

Your Scanner package from Qualys also includes accessories for proper set up in your networking environment.

## Network requirements

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Bandwidth</strong></td>
<td>Minimum recommended bandwidth connection of 1.5 megabits per second (Mbps) to the Qualys Cloud Platform.</td>
</tr>
<tr>
<td><strong>Outbound HTTPS Access</strong></td>
<td>The local network must be configured to allow outbound HTTPS (port 443) access to the Internet, so that the Scanner Appliance can communicate with the Qualys Cloud Platform.</td>
</tr>
<tr>
<td><strong>Access to Qualys Cloud Platform</strong></td>
<td>The Scanner Appliance must be able to reach certain infrastructure located at the Qualys Cloud Platform where your Qualys account is located. Tip - Log in to the Qualys portal and go to Help &gt; About to see the Qualys Cloud Platform servers that need to be whitelisted.</td>
</tr>
<tr>
<td><strong>Access to Target Assets</strong></td>
<td>The assets to be scanned (IP addresses, web applications) must be accessible to the Scanner Appliance.</td>
</tr>
<tr>
<td><strong>DHCP (default) or Static IP</strong></td>
<td>By default the Scanner Appliance is pre-configured with DHCP. If configured with a static IP address, be sure you have the IP address, netmask, default gateway, primary DNS and WINS server (if appropriate). Learn more</td>
</tr>
<tr>
<td><strong>Proxy Support</strong></td>
<td>The Scanner Appliance includes Proxy support with or without authentication - Basic or NTLM. The Proxy server must be assigned a static IP address and must allow transparent SSL tunneling. Proxy-level termination (as implemented in SSL bridging, for example) is not supported. Learn more</td>
</tr>
<tr>
<td><strong>LAN Interface (default) or Split Network config</strong></td>
<td>The LAN interface services both scanning traffic and management traffic to the Qualys Cloud Platform, unless Split Network configuration is enabled. Learn more</td>
</tr>
<tr>
<td><strong>WINS Support</strong></td>
<td>If your network is running Windows Internet Naming Service (WINS), the Scanner Appliance needs to use it for host name resolution during scanning. Using a static IP address, the WINS servers are defined with the static IP settings using the Scanner Console. Learn more</td>
</tr>
</tbody>
</table>
| **VLAN Support**                     | These options are supported:  
- Static LAN configuration with native VLAN support.  
- VLANs defined using the Qualys Cloud Platform UI. Learn more  
Not supported at this time  
- Native (default) VLAN tagging in DHCP mode on the LAN interface is not supported using Consultant Scanner OS version 5.11.1-4. This limitation will be addressed in the next major release of the scanner’s OS software. |
Tell me the steps

1 - Get your Activation Code
You’ll find the Activation Code on the Qualys sticker fastened to your Scanner.

2 - Log in to Qualys Cloud Suite UI and enter your Activation Code
Go to Scans > Appliances and take these steps.

Are you a Unit Manager? For the activation step you’ll need to select an asset group to add the Scanner to. This will make the scanner available to all Unit Managers in your business unit.
3 - Power on the Scanner

Upon success you’ll see the Scanner Appliance name and IP address. This appears only after the scanner makes a successful connection to the Qualys Cloud Platform using DHCP.

Tip - Check Scanner status in Qualys UI

Just log in to Qualys Cloud Suite and go to Scans > Appliances. You’ll see your new Scanner in the appliances list.

Good to Know - It can take a few minutes for the Qualys user interface to get updated after you add a new scanner appliance. Please refresh your browser periodically to ensure that you are seeing the most up to date info.

1 - Activation is complete. Now you can start internal scans! (You’ll see the busy icon is greyed out until you launch a scan using this appliance).
2 - This icon tells you it is a physical scanner appliance.
3 - Latest software versions - these are installed as part of the activation process.
4 - The available capacity will be 100% until you launch a scan. You can come back and check this at any time.
Configuration options

You might need to customize the out of box configuration in order for successful activation to occur. The Scanner Console is used to configure network settings like static IP address, proxy server, and VLAN tag, and power on/off.

Configuration may be required for activation

Keep in mind your Scanner must be able reach our Cloud Security Platform via HTTPS - this is required for successful activation. Depending on your network, you might need to configure network settings using the Scanner Console so that activation can occur successfully.

How do I enter settings? Press the Up and Down arrows to select input fields. Press the Right and Left arrows to scroll within a field. When you are done, select the last item, for example “Configure static IP address on LAN?” and type Y to confirm (or N to cancel).

How to configure a static IP address

By default your Scanner is configured with DHCP. You can define a static IP address.

Tell me the steps

- Access the Scanner Console
- Press the Down arrow to select “Set up network (LAN)” from the main menu
- Press the Right arrow to highlight “Enable static IP config on LAN”
- Press the Right arrow
- Enter settings (use the Up/Down arrows to move thru the settings)
- When “Configure static IP address on LAN?” is selected type Y to confirm
Sample settings for Static IP configuration

![Image]

How to configure IPv6 address for scanning

You have the option to configure the Scanner with an IPv6 address on the LAN interface - this will be used for scanning IPv6 hosts.

Account requirements - The IPv6 Scanning feature must be enabled for your subscription.

How it works

Once configured scanning traffic will be routed through the LAN interface
- LAN IPv4 interface for scanning IPv4 hosts, and
- LAN IPv6 interface for scanning IPv6 hosts

All management traffic (software updates, health checks, etc) will be routed through the LAN IPv4 interface.

1 - Complete the Quick Start

Follow the Quick Start steps, described in this user guide, to activate your Scanner. Be sure your Scanner has successfully connected to the Qualys Cloud Platform. Learn more

Good to Know - Your Scanner must be configured using DHCP or a static IPv4 address before you can configure an IPv6 address for scanning.
2 - Edit Scanner settings using Qualys UI

Log in to Qualys portal.

Go to Scans > Appliances and edit your Scanner Appliance.

1) Select “Enable IPv6 for this scanner”.

2) Choose “Automatically” and we’ll do IP assignment through router advertisement, or choose “Static” and assign a static IP address.

3) Click Save to save the settings with IPv6 configuration.

Don’t see IPv6 Settings? This means the IPv6 Scanning feature is not turned on for your account. Please contact Support or your Technical Account Manager if you’d like us to turn it on for you.

VLAN configuration

These options are supported
- Static LAN configuration with native VLAN support.
- VLANs defined using the Qualys Cloud Platform UI (see steps below).

Not supported at this time
- Native (default) VLAN tagging in DHCP mode on the LAN interface is not supported using Consultant Scanner OS version 5.11.1-4. This limitation will be addressed in the next major release of the scanner’s OS software.

Steps to define VLANS using Qualys Cloud Platform UI

Log in to Qualys portal. Up to 4094 VLANS and static routes can be defined for each Scanner. Go to Scans > Appliances and edit the settings. Don’t see these settings in the UI? The VLAN trunking feature must be turned on for your account. Please contact Support or your Technical Account Representative if you’d like us to turn it on for you.
Proxy configuration

The Scanner includes Proxy support with or without authentication - Basic or NTLM. The Proxy server must be assigned a static IP address and must allow transparent SSL tunneling. Proxy-level termination (as implemented in SSL bridging, for example) is not supported. The Scanner does not support Proxy servers in networking environments where the Proxy server IP address is dynamically assigned. SOCKS proxies are not supported.

Steps to configure proxy using Scanner Console

Access the Scanner Console. Navigate to “Server proxy”, press the Right arrow and enter proxy settings. Defining both a primary and secondary IP address for the Proxy server is supported.

Tell me about Split Network configuration

By default the Scanner LAN interface services all traffic to the Qualys Cloud Platform. This includes management traffic (software updates, health check, scan data upload) and scanning traffic.

![Diagram of Split Network](image)

You have the option to configure a split network configuration for your Scanner by configuring the WAN interface using the Scanner Console. This enables support for networks that do not have direct Internet access. Once configured, management traffic will be routed through the WAN interface and scanning traffic will be routed through the LAN interface. No internal traffic will be routed or bridged to the WAN interface, and no management traffic will be routed or bridged to the LAN interface.

![Diagram of Split Network](image)

Tell me the steps
Access the Scanner Console. Navigate to “Enable WAN Interface”, press the Right arrow and provide the required settings. Once configured, all software updates and health checks are routed through the WAN interface and scanning traffic is routed through the LAN interface.
Troubleshooting

Why do I see an Activation Code?

The Scanner Console displays ACTIVATION CODE in some cases:

- You powered on the Scanner before entering the Activation Code using the Qualys portal UI. Click here for the activation steps

- You entered the wrong Activation Code using the Qualys portal UI, i.e. the Scanner has another activation code.

- You entered the Activation Code following the activation steps but used the wrong Qualys Cloud Platform, e.g. the Scanner is licensed for US Platform 1 instead of US Platform 2.

Communications Failure message

The COMMUNICATION FAILURE message appears if there is a network breakdown between the scanner and the Qualys Cloud Platform.

The communication failure may be due to one of these reasons: the local network goes down, Internet connectivity is lost for some reason, or any of the network devices between the scanner and the Qualys Cloud Platform goes down.

Note the sequence of events following a network breakdown:

- If there are no scans running on the Scanner: The next time the scanner sends a polling request to the Qualys Cloud Platform, the polling request fails, and then the COMMUNICATION FAILURE message appears.

- If there are scans running on the Scanner: The COMMUNICATION FAILURE message appears after the running scans time out. In this case it is recommended you cancel any running scans and restart them to ensure that results are accurate.

Once the network breakdown is resolved, you’ll see the scanner friendly name and IP address and you can start new scans.
The COMMUNICATION FAILURE message remains until the next time the Scanner makes a successful polling request to the Qualys Cloud Platform. There may be a lag time after the network is restored and before the scanner is back online, depending on when the next polling request is scheduled. Additional time is necessary for communications to be processed by a Proxy server if the scanner has a Proxy configuration.

### Network Error message

The network error message indicates the Scanner attempted to connect to the Qualys Cloud Platform and failed. You’ll see an error code with a description to help you with troubleshooting.

Important! The Scanner is not functional until the network error is resolved. Make sure the network set up and/or proxy configuration is correctly defined in the Scanner Console.

### Error listing

**LAN/WAN errors**

<table>
<thead>
<tr>
<th>Error</th>
<th>Description</th>
</tr>
