Preface

This user guide is intended for application developers who will use the Qualys Global IT Asset Inventory API.

About Qualys

Qualys, Inc. (NASDAQ: QLYS) is a pioneer and leading provider of cloud-based security and compliance solutions. The Qualys Cloud Platform and its integrated apps help businesses simplify security operations and lower the cost of compliance by delivering critical security intelligence on demand and automating the full spectrum of auditing, compliance and protection for IT systems and web applications.

Founded in 1999, Qualys has established strategic partnerships with leading managed service providers and consulting organizations including Accenture, BT, Cognizant Technology Solutions, Deutsche Telekom, Fujitsu, HCL, HP Enterprise, IBM, Infosys, NTT, Optiv, SecureWorks, Tata Communications, Verizon and Wipro. The company is also a founding member of the Cloud Security Alliance (CSA). For more information, please visit www.qualys.com.

Contact Qualys Support

Qualys is committed to providing you with the most thorough support. Through online documentation, telephone help, and direct email support, Qualys ensures that your questions will be answered in the fastest time possible. We support you 7 days a week, 24 hours a day. Access support information at www.qualys.com/support/.
Chapter 1 - Welcome

Welcome to Global IT Asset Inventory API.

Get Started
Qualys API Framework - Learn the basics about making API requests. The base URL depends on the platform where your Qualys account is located.

Introduction to Global IT Asset Inventory API Paradigm - Get tips on using the Curl command-line tool to make API requests. Every API request must authenticate using a JSON Web Token (JWT) obtained from the Qualys Authentication API.

Get API Notifications
Subscribe to our API Notifications RSS Feeds for announcements and latest news.

Qualys API Framework
The Qualys Global IT Asset Inventory API uses the following framework.

Request URL
The URL for making API requests respects the following structure:
https://<baseurl>/<module>/<object>/<object_id>/<operation>
where the components are described below.

<table>
<thead>
<tr>
<th>Component</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>&lt;baseurl&gt;</code></td>
<td>The Qualys API server URL that you should use for API requests depends on the platform where your account is located. The base URL for Qualys US Platform 1 is: <a href="https://gateway.qg1.apps.qualys.com">https://gateway.qg1.apps.qualys.com</a></td>
</tr>
<tr>
<td><code>&lt;module&gt;</code></td>
<td>The API module. For the Global IT Asset Inventory, the module is: “am”.</td>
</tr>
<tr>
<td><code>&lt;object&gt;</code></td>
<td>The module specific object.</td>
</tr>
<tr>
<td><code>&lt;object_id&gt;</code></td>
<td>(Optional) The module specific object ID, if appropriate.</td>
</tr>
<tr>
<td><code>&lt;operation&gt;</code></td>
<td>The request operation, such as count.</td>
</tr>
</tbody>
</table>
Qualys API Gateway URL

The Qualys API URL you should use for API requests depends on the Qualys platform where your account is located.

Click here to identify your Qualys platform and get the API URL

This documentation uses the API gateway URL for Qualys US Platform 1 (https://gateway.qg1.apps.qualys.com) in sample API requests. If you’re on another platform, please replace this URL with the appropriate gateway URL for your account.
Introduction to Global IT Asset Inventory API Paradigm

Authentication

You must authenticate to the Qualys Cloud Platform using Qualys account credentials (user name and password) and get the JSON Web Token (JWT) before you can start using the Global IT Asset Inventory APIs. Use the Qualys Authentication API to get the JWT.

For example,

    curl -X POST https://gateway.qg1.apps.qualys.com/auth -d "username=value1&password=passwordValue&token=true" -H "ContentType: application/x-www-form-urlencoded"

where gateway.qg1.apps.qualys.com is the base URL to the Qualys API server where your account is located.

- **username** and **password** are the credentials of the user account for which you want to fetch Global IT Asset Inventory data
- **token** should be true
- **Content-Type** should be "application/x-www-form-urlencoded"

The Authentication API returns a JSON Web Token (JWT) which you can use for authentication during Global IT Asset Inventory calls. The token expires in 2 to 3 hours. You must regenerate the token to continue using the Global IT Asset Inventory API.

Using Curl

**Curl** is a multi-platform command-line tool used to transfer data using multiple protocols. This tool is supported on many systems, including Windows, Unix, Linux and Mac. In this document Curl is used in the examples to build Qualys API requests using the HTTP over SSL (https) protocol, which is required.

Want to learn more? Visit [https://curl.haxx.se/](https://curl.haxx.se/)

The following Curl options are used according to different situations:

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>-X &quot;POST&quot;</td>
<td>The POST method is required for all Global IT Asset Inventory API requests.</td>
</tr>
<tr>
<td>-H &quot;Authorization: Bearer &lt;token&gt;&quot;</td>
<td>This option is used to provide a custom HTTP request header parameter for authentication. Provide the JSON Web Token (JWT) received from Qualys authentication API in the following format: Authorization: Bearer &lt;token&gt; For information about Qualys authentication API, see <a href="#">Authentication</a>.</td>
</tr>
</tbody>
</table>

The sample below shows a typical Curl request using options mentioned above and how they interact with each other.

Limit your results

Use the optional “fields” parameter for any API request to limit the amount of information returned in the results. Simply specify the fields you want to include or exclude in the output, and all other information will be filtered out (excluded). Multiple fields are comma separated.

Sample limit results

Use this request to get a list of all asset hosts with information for only the operatingSystem and hardware fields:

```
'https://gateway.qg1.apps.qualys.com/am/v1/assets/host/list?pageSize=100&includeFields=operatingSystem,hardware'
```

Note: The response would still include all the fields, but other than the included fields, the value returned for all other fields would be null.

You can include the following fields to limit your results:

- activity
- isVirtualMachine
- address
- lastBoot
- agent
- lastLoggedOnUser
- agentId
- mostFrequentUser
- assetName
- netbiosName
- biosAssetTag
- networkInterface
- biosDescription
- openPort
- biosSerialNumber
- operatingSystem
- cloudProvider
- processor
- container
- provider
- cpuCount
- sensor
- dnsName
- service
- hardware
- software
- hostId
- tag
- hwSerialNumber
- timeZone
- inventory
- totalMemory
- isContainerHost
- userAccount
- isHypervisor
- volume
Chapter 2 - Assets Host Data APIs

Use these API functions to get host data from Global IT Asset Inventory

Permissions
- User must have the Global IT Asset Inventory module and the "App API Enabled" option enabled for that role.

Count of Assets
Get count of assets satisfying the specified filter criteria.

/assets/host/count
[POST]

Input Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>filter (String)</td>
<td>Filter the events list by providing a query using Qualys syntax. Refer to the &quot;How to Search&quot; topic in the online help for assistance with creating your query. For example - netbiosName: 'acme' AND name: 'acme.qualys.com' Refer to the list of tokens you can use to build the query: Search tokens</td>
</tr>
<tr>
<td>lastModifiedDate (String)</td>
<td>Date when the asset list was last sync-ed with the UTC format as yyyy-MM-ddTHH:mmZ e.g. 2019-03-01T11:30Z</td>
</tr>
<tr>
<td>lastSeenAssetId (Integer)</td>
<td>Use to get the count of assets having asset id greater than the specified last seen assetid.</td>
</tr>
<tr>
<td>Authorization (String)</td>
<td>(Required) Authorization token to authenticate to the Qualys Cloud Platform. Prepend token with &quot;Bearer&quot; and one space. For example - Bearer authToken</td>
</tr>
</tbody>
</table>

Sample - Get count of all assets

Request:

Response:

{
  "count": 1119,
  "responseCode": "SUCCESS",
  "responseMessage": "Valid API Access"
}
List Host details of all assets

Get details of all assets.

/assets/host/list

[POST]

Input Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>excludeFields (String)</td>
<td>Comma separated list of fields to be excluded from the asset object in the response. Default is None. You can choose from the list of fields specified in the section “Limit your results”. For example, to exclude openPort and software from the response: excludeFields=openPort,software</td>
</tr>
<tr>
<td>includeFields (String)</td>
<td>Comma separated list of fields to be included in the asset object in the response. Default is All. You can choose from the list of fields specified in the section “Limit your results”. For example, to include only operatingSystem and hardware in the response: includeFields=operatingSystem,hardware</td>
</tr>
<tr>
<td>lastModifiedDate (String)</td>
<td>Date when the asset list was last sync-ed with the UTC format as yyyy-MM-ddTHH:mmZ e.g. 2019-03-01T11:30Z</td>
</tr>
<tr>
<td>lastSeenAssetId (Integer)</td>
<td>Use to get the count of assets having asset id greater than the specified last seen assetid.</td>
</tr>
<tr>
<td>pageSize (Integer)</td>
<td>The number of records per page to be included in the response. Default is 100.</td>
</tr>
<tr>
<td>Authorization (String)</td>
<td>(Required) Authorization token to authenticate to the Qualys Cloud Platform. Prepend token with &quot;Bearer&quot; and one space. For example - Bearer authToken</td>
</tr>
</tbody>
</table>

Sample - List details of all asset

Request:

```bash
```

Response:

```json

### List Host details for specific fields

Get details of all assets that satisfy the filter criteria to include or exclude specified fields.

`/assets/host/filter/list`

[POST]

#### Input Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>excludeFields (String)</td>
<td>Comma separated list of fields to be excluded from the asset object in the response. Default is None. You can choose from the list of fields specified in the section “Limit your results”. For example, to exclude openPort and software from the response: <code>excludeFields=openPort,software</code></td>
</tr>
<tr>
<td>includeFields (String)</td>
<td>Comma separated list of fields to be included in the asset object in the response. Default is All. You can choose from the list of fields specified in the section “Limit your results”. For example, to include only operatingSystem and hardware in the response: <code>includeFields=operatingSystem,hardware</code></td>
</tr>
<tr>
<td>lastModifiedDate (String)</td>
<td>Date when the asset list was last sync-ed with the UTC format as yyyy-MM-ddTHH:mmZ e.g. 2019-03-01T11:30Z</td>
</tr>
<tr>
<td>lastSeenAssetId (Integer)</td>
<td>Use to get the count of assets having asset id greater than the specified last seen assetid.</td>
</tr>
<tr>
<td>pageSize (Integer)</td>
<td>The number of records per page to be included in the response. Default is 100.</td>
</tr>
<tr>
<td>filter (String)</td>
<td>(Required) Filter the events list by providing a query using Qualys syntax. Refer to the “How to Search” topic in the online help for assistance with creating your query. For example - netbiosName: 'acme' AND name: 'acme.qualys.com' Refer to the list of tokens you can use to build the query: <code>Search tokens</code></td>
</tr>
<tr>
<td>Authorization (String)</td>
<td>(Required) Authorization token to authenticate to the Qualys Cloud Platform. Prepend token with &quot;Bearer&quot; and one space. For example - Bearer authToken</td>
</tr>
</tbody>
</table>
Sample - List details of asset hosts that belong to Linux Operating system category

Chapter 2 - Assets Host Data APIs
List Host details for specific fields
Appendix A - Error Messages

This appendix describes the types of error messages returned from Global IT Asset Inventory API requests.

<table>
<thead>
<tr>
<th>Error Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>400</td>
<td>The request could not be understood by the server due to malformed syntax.</td>
</tr>
<tr>
<td>403 Forbidden</td>
<td>This response code is returned for the following scenarios:</td>
</tr>
<tr>
<td></td>
<td>- If the Asset Inventory License is in “Pending Activation”.</td>
</tr>
<tr>
<td></td>
<td>- If “App API Enabled” option is not checked.</td>
</tr>
<tr>
<td></td>
<td>- If “App API Enabled” option is checked, but the license expiration date (for Trial/Full customers) has elapsed.</td>
</tr>
<tr>
<td></td>
<td>- If the customer’s license subscription cannot be validated.</td>
</tr>
<tr>
<td>404 Not found</td>
<td>The server has not found anything matching the Request</td>
</tr>
<tr>
<td>416</td>
<td>Please provide a Pagesize value less than 100.</td>
</tr>
<tr>
<td>500 Failure</td>
<td>The server encountered an unexpected condition which prevented it from fulfilling the request</td>
</tr>
</tbody>
</table>
