Qualys Cloud Platform
Quick Tour

The Qualys Cloud Platform is a platform of integrated solutions that provides businesses with asset discovery, network security, web application security, threat protection and compliance monitoring. It’s all in the cloud - simply log into your account from any web browser to get everything you need to secure all of your IT assets.

Let’s take a look at the Qualys user interface and how to get around.

Choose One of our Solutions
Our integrated suite of solutions is presented to you in a single view. Simply choose the solution you’re interested in from the application picker and get started right away!
Go to a Section
You’ll see a set of menu options across the top of the screen representing the main areas of functionality. Each section provides workflows specific to the application you’re in. For example, go to the Scans section to launch and manage scans; go to the Reports section to run and manage reports.

Each section includes at-a-glance all of the tools and setup options you need for success. In the Scans section you have access to your scan schedules, scanner appliances, option profiles, authentication records and scan setup options. This means you don’t have to leave the Scans section to set up your scan configurations or set global options related to scans.

Take Action
Start New Workflows
The New menu above each list is your starting point for new workflows and configurations. Use the New menu to start scans, run reports, create new option profiles, and so on.
Take Quick Actions on a Single Item

You can take action on a single item in a list using the Quick Actions menu. For example, view or download the Scan Results report for a finished scan. When you hover over a data list row, the row is highlighted and a drop-down arrow appears. Click the arrow to see the Quick Actions menu with available actions for the selected item.

Take Bulk Actions on Multiple Items

You can take bulk actions on multiple items in a list using the Actions menu. For example, pause or cancel multiple running scans in a single action. Select the check box for each item in the list your action applies to, then select an action from the Actions menu.
Use Filters

Use filters to change your list view. For example, if you’re on the scans list and you’re only interested in finished scans, then you would select Finished Scans from the Filters menu. The list is instantly updated and a message appears next to the Filters menu as a visual reminder that filters are turned on. Clear the filter to return to the full list.

Customize Your View

You can hide columns, change the sorting criteria and specify the number of rows to appear in each list. To do so, use the Tools menu above the list, on the right side.
Review Setup Options
Review setup options in the context of your current view. When you’re in the Scans section go to the Setup tab to see global options related to scans and scan results. When you’re in the Users section go to the Setup tab to see options related to users, and so on. The setup options available to you depend on your service level and subscription settings. The ability to edit setup options is determined by your role and permissions.

Manage Assets
Your account will include all of the assets that you’re scanning or monitoring for security. For example, in Vulnerability Management (VM), go to the Assets section (shown below) to see host assets (IP addresses), domains and virtual hosts in your account. In Web Application Scanning (WAS), you go to the Web Applications section to see the web applications you can scan for vulnerabilities and malware.
Manage Users
The Users section is where you manage users, business units and distribution groups. Any user with management authority can add users with unique roles and privileges.

Make Changes to Your Account
To change your password, home page, contact information, or email notifications, select from the options that appear below your user name in the top, right corner.

Get Up to Date Views on your IT Assets
Each solution includes an interactive dashboard with a high-level summary of your security and compliance posture based on the latest data available in your account.
AssetView (AV)

AV gives you a centralized location where you can view and query all of your asset data instantly. It brings security and compliance information together in one place, and lets you visualize your asset data in many ways.

![AssetView screenshot]

Vulnerability Management (VM)

Find out where your IT systems are vulnerable to the latest threats & how to protect them.

![Vulnerability Management screenshot]
Cloud Agent (CA)
Get continuous security updates through the cloud by installing agents on your hosts.

Continuous Monitoring (CM)
Immediately receive alerts when new security risks are detected by your vulnerability scans. Changes to hosts will be monitored and alerts will be generated every time a change occurs.
**Threat Protection (TP)**

Automatically prioritize the vulnerabilities that pose the greatest risk to your organization. Threat Protection correlates active threats against your vulnerabilities.

![Threat Protection Dashboard](image1)

**Policy Compliance (PC)**

Get automated security configuration assessments on IT systems throughout your network. Reduce risk & continuously comply with internal policies and external regulations.

![Policy Compliance Dashboard](image2)
Security Assessment Questionnaire (SAQ)
Collect and analyze the risk and compliance data you need, from your employees and third party vendors, through automated campaigns.

Web Application Scanning (WAS)
Identify vulnerabilities and security risks on your web applications, including cross-site scripting (XSS) and SQL injection.
Web Application Firewall (WAF)

WAF is our next-generation cloud service that brings an unparalleled combination of scalability and simplicity to web app security.

Malware Detection (MD)

MD lets you quickly identify and eradicate malware that could infect your website visitors and lead to loss of data and revenue.
PCI Compliance (PCI)
Achieve and validate compliance with the PCI Data Security Standard (PCI DSS). Use our solution for PCI compliance testing, reporting and submission. Qualys is an Approved Scanning Vendor (ASV).

SECURE Seal (Seal)
Demonstrate to your customers that you maintain a rigorous and proactive security program by displaying the Qualys SECURE seal on your website.
