

Qualys SAML & OneLogin Integration

This document shows how to configure OneLogin for IdP-initiated SAML 2.0 SSO integration with Qualys. A typical configuration will primarily require updating the 'Configuration' and 'Parameters' tab. [Click here](#) for complete information on Qualys SAML Support.

Below are screenshots of a successful example.

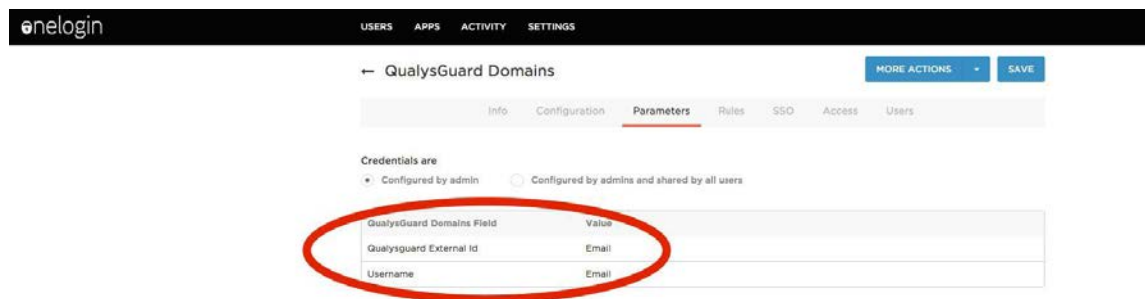

The screenshot shows the OneLogin interface for configuring QualysGuard Domains. The 'Configuration' tab is active. The 'Application Details' section contains the following fields:

- Customer ID: 84cad006b9e3
- Domain: qualysguard.qualys.com

Annotations in red text provide additional context:

- "This is determined by which platform your account resides on. ex. Platform 1= qualysguard.qualys.com Platform 2= qualysguard.qg2.apps.qualys.com EU= qualysguard.qualys.eu" with an arrow pointing to the Domain field.
- "This can be found by looking at the custom url Qualys will provide you. ex. https://qualysguard.qualys.com/fo/login.php? idm_key=saml2_84cad006b9e3" with an arrow pointing to the Customer ID field.

The 'Your Qualysguard Domain instance ex: https://qualysguard.qualys.com/idM/saml2/' is also visible at the bottom of the configuration section.

The screenshot shows the OneLogin interface for configuring QualysGuard Domains, specifically the 'Parameters' tab. The 'Credentials are' section is visible, with the following table:

QualysGuard Domains Field	Value
Qualysguard External Id	Email
Username	Email

The table is circled in red.
