

Qualys Certificate View

Release Notes

Version 2.8

February 25, 2021

Here's what's new in Qualys Certificate View 2.8!

[Global Dashboard Permissions](#)

Qualys Certificate View 2.8 brings you many more improvements and updates! [Learn more](#)

Global Dashboard Permissions

The dashboard permissions are now applied at the global level for Certificate View. You can assign these permissions from the Administration Module.

When you assign the Global Dashboard permissions to a role, the Global Dashboard permissions override the module-specific dashboard permissions, and the module-specific dashboard permissions are ignored.

We have added the global dashboard permissions to the following pre-created Certificate View roles:

- Certificate View Administrator

The screenshot displays the 'Role View: Certificate View Administrator' interface. On the left, a sidebar contains 'View Mode' with options for 'Role Details', 'Permissions' (selected), and 'Action Log'. The main content area is titled 'Edit permissions for this role' and includes 'Access method(s)' with 'UI Access Enabled' and 'API Access Enabled' buttons. Under 'Granted modules', the 'UD Global Dashboard Permissions' module is highlighted with a red rounded rectangle. It lists four permissions: 'Print/Download Dashboard', 'Delete Dashboard', 'Edit Dashboard', and 'Create, Edit, Delete your own dashboards'. Below this, the 'CERT Certificate View' module is shown with the note 'All permissions granted for this module View'. At the bottom, there are 'Close' and 'Edit' buttons.

- Certificate View User

The screenshot displays the 'Role View: Certificate View User' interface. On the left, a 'View Mode' sidebar contains 'Role Details', 'Permissions' (highlighted), and 'Action Log'. The main content area is titled 'Edit permissions for this role' and includes sections for 'Access method(s)' (UI Access Enabled), 'Granted modules', and 'Certificate View'. The 'Global Dashboard Permissions' module is circled in red, showing a dropdown for 'Global Dashboard Permissions Permissions (1)' with the description 'Create, Edit, Delete your own dashboards'. The 'Certificate View' module lists 'Alerting Permissions (1)' and 'CERTVIEW Permissions (1)'. 'Close' and 'Edit' buttons are at the bottom.

Role View: Certificate View User

View Mode

Issues addressed in this release

- We fixed multiple issues, and the assets and external site data can now be downloaded accurately from the Assets tab.
- We have fixed the grade discrepancies for a certificate that was observed between SSL Labs and Certificate View with this release.
