

Qualys Certificate View

Release Notes

Version 2.9.0

September 08, 2022

Qualys Certificate View 2.9.0 brings you many improvements and updates!

New Tokens for Certificate and Asset Tabs

We have introduced the following new search tokens to enhance your search results for certificates.

Certificates Tab

certificate:(serialNumber:) - This token helps you find a certificate with a specific serial number.

`certificate:(serialNumber: "01ab8a210a7cf9955665c47fca758459ca78")`

This token shows a certificate that has this specified serial number.

Assets Tab

certificate:(serialNumber:) - This token helps you find assets with a certificate that has a specific serial number.

`certificate:(serialNumber: "0686793b5f66d74e877cc09eedb09d90")`

This token shows assets with a certificate that has this specified serial number.

Issues Addressed

With this release, we have done multiple enhancements for performance improvement.

- When a user tagged a few assets (and not all assets) and then executed the certificate report, the certificate was not displayed in the report for the tagged assets. We have now resolved the issue so that the tagged assets display correct certificates in the certificate report.
- We cleaned the stale/orphaned certificates from the database with this release.
- We fixed the issue where a user was not able to view the edit API key for the recently renewed Digicert Trusted Intermediate CAs.
- We fixed the Expired certificate chain path for Approved certificates displayed in the Configurations tab.
