

Qualys Cloud Agent Linux 3.8.0 (ARM)

October 2021

We're excited to tell you about new features, improvements, platform coverage changes, and fixes in this Cloud Agent release. These updates are specific to the agent binary. Platform updates for new features and fixes of management, syncing, tagging, and reporting capabilities of Cloud Agents are documented in the Cloud Platform and Cloud Suite release notes.

New Features

- AWS IMDSv2 Support
 - Added support for v2 of the AWS Instance MetaData Service that Cloud Agent uses to collect instance metadata in addition to the original v1 service support
 - IMDS is required to be running and accessible by the Cloud Agent to properly collect and report on cloud provider instance metadata to the Qualys platform
- Parallel Scan Support
 - Added support for parallel scans on the agent side and parallel upload of the different manifest for the split snapshots

Enhancements

There are no noted behavior changes in this release.

Behavior Changes

There are no noted behavior changes in this release.

Platform Coverage Support (Operating Systems)

There are no new platform coverages in this release.

Fixed Defects

The following reported and notable issues have been fixed in this release.

ID	Description
CRM-81523	Fixed an issue where the Linux agent on the cloud instance was collecting the instance id of the proxy instead of the actual cloud instance when the system-level proxy is configured.

Known Limitations and Workarounds

There are no reported and notable issues open in this release.
