Qualys Cloud Platform (VM, PC) v10.x

API Release Notes

Version 10.18
March 16, 2022 (Updated April 12, 2022)

This new version of the Qualys Cloud Platform (VM, PC) includes improvements to the Qualys API. You’ll find all the details in our user guides, available at the time of release. Just log in to your Qualys account and go to Help > Resources.

What’s New
- Compliance Policy - Manage Asset Tags using API
- New Parameter in Launch Map API for Network-enabled Subscription
- CSV Header Text Updated in Compliance Policy Reports
- Support for Compressed Reports with PCRS
- Issues Addressed
Qualys API Server URL

The Qualys API URL you should use for API requests depends on the Qualys platform where your account is located.

Click [here](https://qualysapi.qualys.com) to identify your Qualys platform and get the API URL.

This documentation uses the API server URL for Qualys US Platform 1 (https://qualysapi.qualys.com) in sample API requests. If you’re on another platform, please replace this URL with the appropriate server URL for your account.
Compliance Policy - Manage Asset Tags using API

Starting in this release, you can manage the asset tags assigned to a compliance policy using the API. You can add, remove, and set asset tags for a policy.

Good to Know

- Asset Tagging service must be enabled for your subscription.
- You must have permission to modify the policy you want to update.

Input Parameters

With the new API actions, you can add, remove, and set asset tags for a policy.

The set asset tag action will overwrite the existing asset tags for a policy. The set tag API does not check whether any asset tags are added to the policy and will overwrite the existing asset tags for a policy.

The add asset tag action will check whether the asset tags are already associated with the policy and only add the asset tags that are new to the policy.

Use the following input parameters to manage asset tags in compliance policies. Refer to the Qualys API (VM,PC) User Guide for details on all available input parameters.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>action={value}</td>
<td>(Required) Specify one of the following actions (using POST):</td>

Sample Adding Asset Tags

In this sample, we are adding an asset tag to a policy.

**API Request:**

```bash
curl -u "USERNAME:PASSWORD" -H "X-Requested-With: Curl" -X "POST" -d "id=4201701&tag_set_include=118766028&tag_include_selector=all" https://qualysapi.qualys.com/api/2.0/fo/compliance/policy/?action=add_asset_tags
```

**XML Output:**

```xml
<?xml version="1.0" encoding="UTF-8" ?>
<!DOCTYPE SIMPLE_RETURN SYSTEM "https://qualysapi.qualys.com/api/2.0/simple_return.dtd">
<SIMPLE_RETURN>
  <RESPONSE>
    <DATETIME>2022-01-19T06:35:40Z</DATETIME>
    <TEXT>Compliance Policy successfully modified.</TEXT>
    <ITEM_LIST>
      <ITEM>
        <KEY>ID</KEY>
        <VALUE>{value}</VALUE>
      </ITEM>
    </ITEM_LIST>
  </RESPONSE>
</SIMPLE_RETURN>
```
Qualys Cloud Platform (VM, PC) v10.x
Compliance Policy - Manage Asset Tags using API

Sample Removing Asset Tags
In this sample, we are removing an asset tag from a policy.

**API Request:**
curl -u "USERNAME:PASSWORD" -H "X-Requested-With: Curl" -X "POST" -d "id=4201701&tag_set_include=118766028&tag_include_selector=all" "https://qualysapi.qualys.com/api/2.0/fo/compliance/policy/?action=remove_asset_tags"

**XML Output:**
```xml
<?xml version="1.0" encoding="UTF-8" ?>
<!DOCTYPE SIMPLE_RETURN SYSTEM "https://qualysapi.qualys.com/api/2.0/simple_return.dtd">
<SIMPLE_RETURN>
  <RESPONSE>
    <DATETIME>2022-01-19T06:35:40Z</DATETIME>
    <TEXT>Compliance Policy successfully modified.</TEXT>
    <ITEM_LIST>
      <ITEM>
        <KEY>ID</KEY>
        <VALUE>4201701</VALUE>
      </ITEM>
    </ITEM_LIST>
  </RESPONSE>
</SIMPLE_RETURN>
```

Sample Setting Asset Tags
In this sample, we are setting asset tags for a policy.

**API Request:**
curl -u "USERNAME:PASSWORD" -H "X-Requested-With: Curl" -X "POST" -d "id=4201701&tag_set_include=118766028&tag_include_selector=all" "https://qualysapi.qualys.com/api/2.0/fo/compliance/policy/?action=set_asset_tags"
XML Output:

```xml
<?xml version="1.0" encoding="UTF-8" ?>
<!DOCTYPE SIMPLE_RETURN SYSTEM
"https://qualysapi.qualys.com/api/2.0/simple_return.dtd">
<SIMPLE_RETURN>
  <RESPONSE>
    <DATETIME>2022-01-19T06:28:30Z</DATETIME>
    <TEXT>Compliance Policy successfully modified.</TEXT>
    <ITEM_LIST>
      <ITEM>
        <KEY>ID</KEY>
        <VALUE>4201701</VALUE>
      </ITEM>
    </ITEM_LIST>
  </RESPONSE>
</SIMPLE_RETURN>
```
New Parameter in Launch Map API for Network-enabled Subscription

<table>
<thead>
<tr>
<th>APIs affected</th>
<th>/msp/map-2.php</th>
</tr>
</thead>
<tbody>
<tr>
<td>New or Updated API</td>
<td>Updated</td>
</tr>
<tr>
<td>DTD or XSD changes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

The Launch Map API is used to launch a Qualys network map for one or more domains for initiating network discovery.

We added the input parameter `network_id` to the Launch Map API, which allows users to map domains/netblocks in a custom network. This option is only available in subscriptions with the Network Support feature enabled.

**Launch Map**

The table below shows the new input parameter. Refer to the Qualys API (VM,PC) User Guide for details on all available input parameters.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>network_id=[value]</td>
<td>(Optional, and valid only when the Network Support feature is enabled for the user’s account) Restrict the request to a certain custom network by specifying the network ID. When unspecified, we default to &quot;0&quot; for Global Default Network.</td>
</tr>
</tbody>
</table>

**Sample API**

In this sample, the user has passed `network_id=4234545` as part of the API request for network enabled account.

**API Request:**

```bash
```

**XML Output:**

```xml
<?xml version="1.0" encoding="UTF-8" ?>
<!DOCTYPE MAP_REQUEST SYSTEM "https://qualysapi.qualys.com/map-2.dtd">
<MAP_REQUEST>  <!-- QQQQQQQQQQQQQQQQQQQQQQQQQQQQQQQQQQQQQQQQQQQQQQQQQQQ -->
<!-- map is running on mydomain.com -->
</MAP_REQUEST>
```
<MAP value="map/1234567890.12345">
  <HEADER>
    <KEY value="USERNAME">joe_user</KEY>

CSV Header Text Updated in Compliance Policy Reports

APIs affected /api/2.0/fo/report/
New or Updated API Updated
DTD or XSD changes No

We made a change to the CSV header text for Control and Host data in custom Compliance Policy Reports.

In Compliance Policy Reports using a custom report template with control statistics enabled, discrepancies were observed in the header information in the CSV format as compared to HTML and PDF formats. In CSV format, control and host data was displayed under the header “Control Summary” and “Host Statistics” respectively; whereas, in PDF and HTML reports, the same data was visible under the header “Control Statistics (Percentage of Hosts Passed per Control)” and “Host Statistics (Percentage of Control Passed per Host)” respectively.

This release makes the header text consistent across all report formats and the header text in CSV reports has been updated to Control Statistics (Percentage of Hosts Passed per Control) for control information and Host Statistics (Percentage of Control Passed per Host) for host-specific information.

You can download Compliance Policy Reports from the UI or fetch reports using the API. See a sample CSV report below.

Download Policy Report in CSV Format

In this sample, we’re downloading a Compliance Policy Report in CSV format. The report includes control statistics. In the output, you’ll see the new header text.

API request:

CSV output:

In the sample CSV policy compliance report, the updated header text is highlighted.
Support for Compressed Reports with PCRS

<table>
<thead>
<tr>
<th>API affected</th>
<th>/api/2.0/fo/report/</th>
</tr>
</thead>
<tbody>
<tr>
<td>New or Updated APIs</td>
<td>No (affects report output only)</td>
</tr>
<tr>
<td>DTD or XSD changes</td>
<td>No</td>
</tr>
</tbody>
</table>

Policy Compliance Reporting Service (PCRS) is a new reporting service to improve performance in Policy Compliance report generation. With PCRS, report generation is enhanced to be more efficient and faster. We are starting by enhancing policy reports in CSV format by automatically compressing large size reports. When you run a policy report in CSV format, the report will be in ZIP format if the report size is between 1 GB and 5 GB; while reports less than 1 GB will be in CSV format. Similar improvements to other report formats will be added soon. You can download reports from the user interface or fetch reports by using APIs.

We had previously announced the introduction of PCRS, and we’re now ready to enable PC customers with this service. PCRS will be automatically enabled for PC customers starting in 30 days from the time of this notification. Contact Qualys Support if you do not want this feature to be enabled for your subscription.

See this previous notification: Qualys Cloud Platform (PCRS) API Notification

Download reports from the UI

To download reports from the UI, go to the Reports data list, select the report you want to download and click Download from the Quick Actions menu. If the policy CSV report size is more than 1 GB, it will be downloaded as a .zip file.

Fetch reports using the API

Important: If you are currently using the Report API to launch and fetch compliance policy reports in CSV format, then it’s important to note that once PCRS is enabled for your subscription, any CSV compliance policy report that is over 1GB in size will be compressed automatically and you will get a ZIP file instead of a CSV file. You’ll need to update your code or work with your 3rd party vendor to monitor the response header and if the report is compressed, add a step to uncompress the ZIP file before parsing the data.
When fetching a report using the API, the response header will indicate if the report is compressed or not. See the API samples that follow.

- In case of compressed reports, header content-type is - application/zip
- In case of uncompressed reports, header content-type is - text/csv

**Sample: Report size more than 1 GB**

In this sample, the report being downloaded is more than 1GB in size.

**API Request**

```bash
```

**Response Header**

You’ll notice that the header Content-Type is "application/zip"

Support for Compressed Reports with PCRS
Issues Addressed

- Now you’ll get an appropriate error message when updating a host in a custom network using the API and the host_id specified does not belong to the network_id specified or the network_id was not specified.

- We fixed an issue where the Update Schedule Scan API incorrectly returned an error message in the API response stating that a virtual or physical scanner is needed to scan private IPs. Now users can scan private and non-internal IPs in same scan job with virtual/physical scanner.

- We fixed an issue where the user could not create a Windows authentication record with the same IP present in a different network via API. Now users can create a Windows record if the IP is in a different network. An error for the duplicate network is displayed if a user tries to create a Windows record in the same network with the same IP.

- When the customer was using asset tags-related parameters in the Posture API call, the posture data was not getting filtered properly.

- Improved UI and API validation error messages and documentation to explain that if the Network Support feature is enabled for your subscription, then authentication records for application technologies must have the same network selection as the corresponding Unix/Windows authentication record for the host running the application.

- We fixed an issue for AGMS-enabled subscriptions so users will now get the correct assigned asset group list returned from the User List API (/msp/user_list.php).
