

Qualys Cloud Platform v2.x

Release Notes

Version 2.38.1

May 14, 2019

Qualys Cloud Platform 2.38.1 brings you the following improvements and updates:

AV

Asset View

- You can now manually add tags to any type of assets from the AssetView module.
- Fixed an issue in AssetView where the Actions > Activate Assets option was not available (grayed out) when multiple assets were selected. You can now use the Activate Assets option to activate multiple assets.
- We have updated the "Base Account" help topic in AssetView online help for better and clear understanding of the base account feature.

MD

Malware Detection

- Fixed an issue where the Detections tab shows pages which are marked as SAFE under the Scan List. Now SAFE pages won't appear under the Detections tab.
- Fixed an issue where the Malware Detection Scan List Severity Filter did not return the correct results.

VM

Vulnerability Management

- We can now successfully add numbers during rule formation in Dashboard widget.
- Accurate date format is now displayed in the EC2 tab of Asset Summary.
- Correct search results are now displayed in the Tag Selector.
- User name validation for unique name while creating or editing a widget now works appropriately.

WAS

Web Application Scanning

- We now support successful import of files with .movie extension in web applications.
- We have added the following note for name parameter in Web Application Report, Reference: Report, Reference: Report Creation topics of the WAS API User Guide.

Note: Generating a report without template will allow you to assign a name to the report. If you use template during report generation, the name you provide in the request is ignored and the template name is assigned to the report.
