Qualys Policy Compliance (PC)

Support for New Technologies

We now support the following new technologies on assets for which data is collected using Out-of-Band Configuration Assessment (OCA) tracking.

- HP Safeguard
- CISCO ACS 5

Simply, navigate to Reports tab and run the Policy Compliance Reports and Authentication Report on these technologies to view your compliance posture.

Sample: Policy Compliance Report for HP Safeguard

The screenshot displays a web interface for HP Policy Compliance. At the top, there is a blue header with the 'HP' logo and a menu bar with 'File', 'View', and 'Help'. Below the header, the main content area is titled 'Host Statistics (Percentage of Control instances Passed per Host)'. This section contains a table with columns for IP, Tracking, Qualys Host ID, DNS, NetBIOS, OS, Last Scan Date, and %. Three hosts are listed, all showing 100% compliance. Below the table is a 'Detailed Results' section for the host 10.10.11.25 (hpassetestnew, NETBIOS25). This section shows a 'PASS' status with 7 controls passed and 0 failed. It also includes metadata such as the tracking method (OCA), last scan date (05/03/2019 at 05:04:42 GMT-0700), and the Qualys Host ID (26f9e117-551a-4f79-8678-bc2de37c2f7f).

Issues Addressed

- Introduced new back-end processing pipeline to improve Agent snapshot processing rates.
- Now when a Scanner user tries to launch a scan via the API using a scanner appliance that they don't have access to, an API error will appear instead of the scan defaulting to the External Scanner option.
- Fixed an issue where DTD validation was failing for Microsoft Azure Key Vault because the APP_ID element was not in the correct position and did not match the DTD.
