

# Qualys File Integrity Monitoring (FIM)

## Release Notes

Version 3.4.2.0

July 15, 2022

Here's what's new in Qualys File Integrity Monitoring 3.4.2.0!

### New Feature

- Support for OpenSearch

### Fixed Issue

- Event filter with a wildcard character failed to fetch results

## **New Feature**

### **Support for OpenSearch**

This release adds support for OpenSearch to enhance the search capabilities of Qualys FIM. Integration with OpenSearch enables you to quickly search FIM data collected across your network. Being FedRAMP compliant, OpenSearch also ensures that you have access to a secure, FedRAMP-compliant solution.

## **Fixed Issue**

### **Event filter with a wildcard character failed to fetch results**

Searching for events by using filters that included a wildcard character did not fetch results for some file extensions. For instance, searching for events by using a wildcard as shown in the following examples would fetch no results:

```
file.name:*.fim
```

```
file.name:*.log
```

This issue is now fixed and event searches that include wildcards now display results for all types of files.
