

Qualys Out-of-Band Configuration Assessment

Release Notes

Version 1.7.0

Here's what's new in Out-of-Band Configuration Assessment (OCA) 1.7.0!

[Qualys OCA Dashboard](#)

[Command Enhancements for Cisco IOS XR7 Technology](#)

Qualys OCA Dashboard

With this release, we've added a new feature called Dashboard with non-editable widgets for Qualys Out-of-Band Configuration Assessment (OCA). The dashboard displays OCA asset data and the compliance posture of these assets.

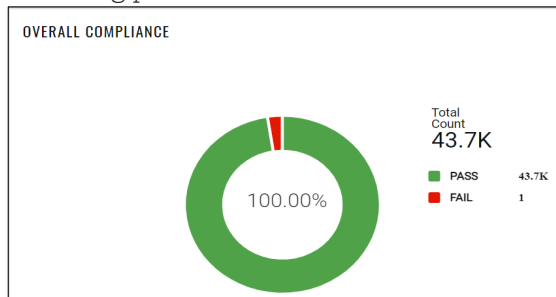

The OCA supports two dashboards (Default Dashboard and Printers Dashboard) with non-editable widgets like Overall Compliance, Failure by Criticality, Overall Compliance for Printers, Compliance Data for Printers, etc.

OCA Default Dashboard

The OCA default dashboard includes six non-editable widgets that display asset statistics and compliance posture related to all the assets provisioned through OCA.

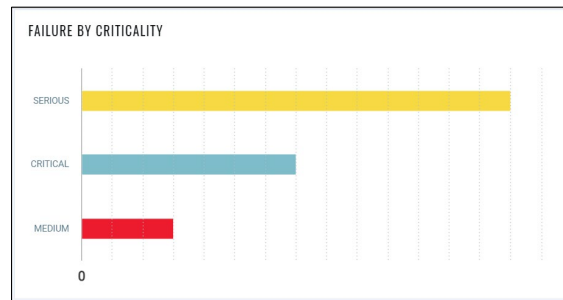

Overall Compliance

This non-editable widget displays the overall compliance data based on passed and failed control count for all the assets including printers.

Failure by Criticality

This non-editable widget uses a statistical graph to display number of failed controls by criticality - MEDIUM, CRITICAL, SERIOUS.

Top Failing Policies

This non-editable widget displays the top failing policies.

TITLE	LAST EVALUATED	MODIFIED	COMPLIANCE
Security Configuration and Compliance Policy for ArubaOS 6.x (OCA) v.2.0	Feb 17, 2021	Feb 10, 2021	72.41%
OCA policy	Dec 23, 2020	Dec 23, 2020	95.45%

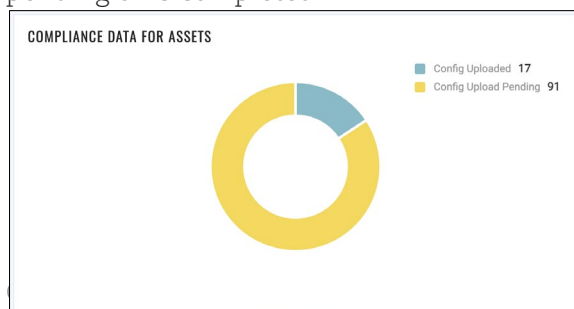

Asset Provision Status

This non-editable widget displays the status of asset provisioning by the status – Provision Confirmed and Provision Pending.

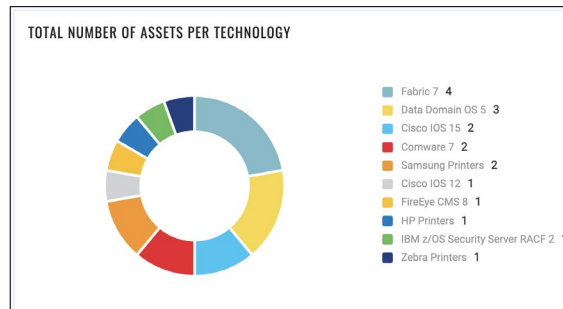

Compliance Data for Assets

This non-editable widget displays if upload of asset configuration data to Qualys is pending or is completed.

Total Number of Assets per Technology

This non-editable widget displays the total number of assets per technology.

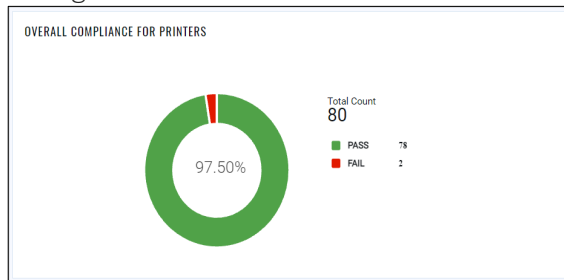

OCA Printers Dashboard

The Printers OCA Dashboard includes four non-editable widgets that display essential asset data, compliance posture of HP and Samsung Printers provisioned via HP's JetAdvantage HP Security Manager plug in.

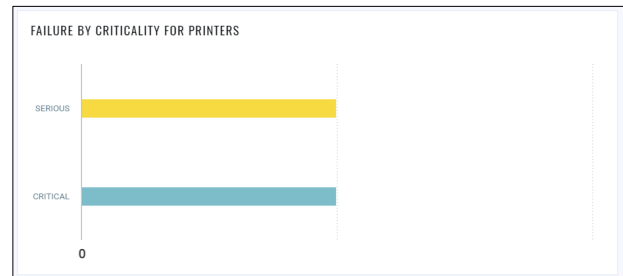

Overall Compliance for Printers

This non-editable widget displays the compliance assessment of printers with respect to number of controls passing and failing.

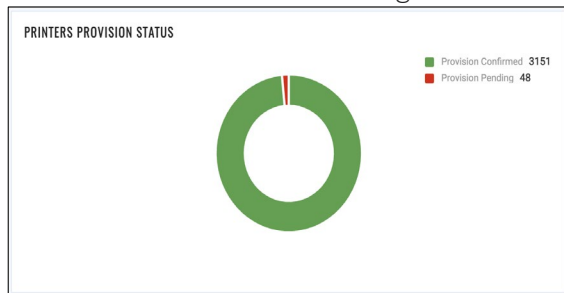

Failure by Criticality for Printers

This non-editable widget uses a statistical graph to display number of failed controls by criticality - MEDIUM, CRITICAL, SERIOUS.

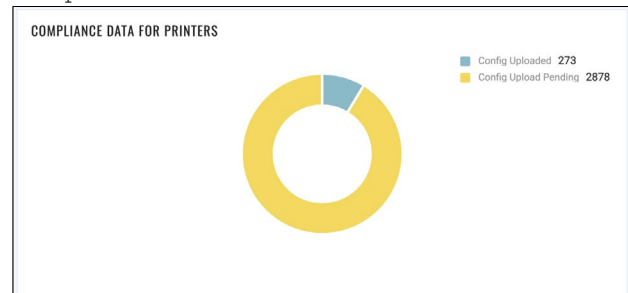

Printers Provision Status

This non-editable widget displays the status of printer assets provisioning - Provision Confirmed or Provision Pending.

Compliance Data for Printers

This non-editable widget displays if upload of printer configuration data to Qualys is pending or is completed.

Command Enhancements for Cisco IOS XR7 Technology

With this release, we've changed a command for which output needs to be uploaded for assessment of Cisco IOS XR7 assets.

- **Previous:** show running-config all
 - **Latest:** show running-config
- Description:** This command displays the device's current configuration.
