December 07, 2021

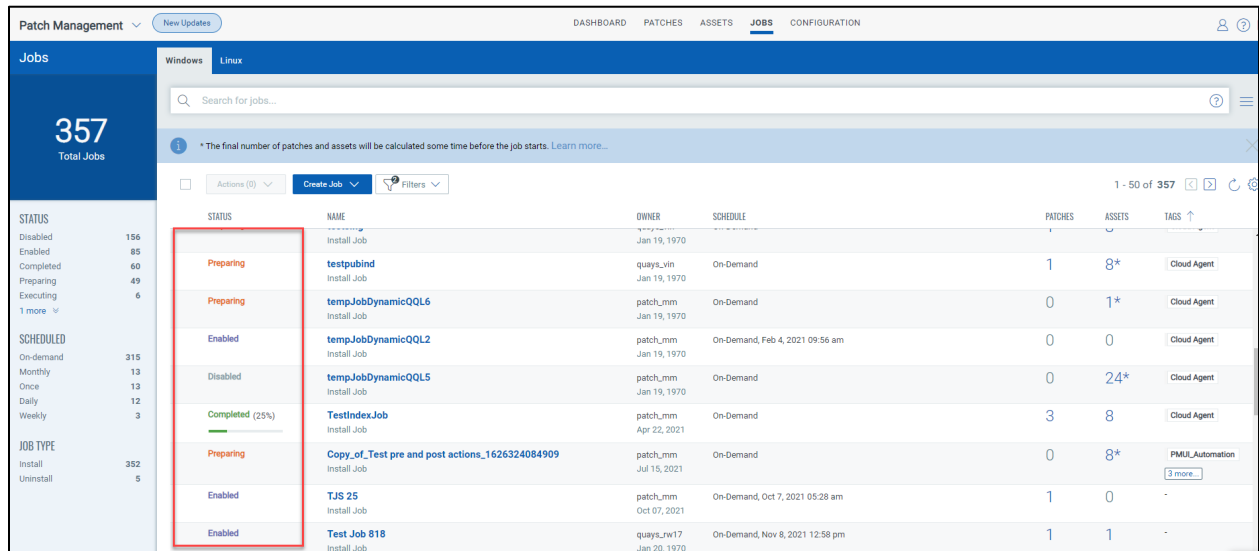

Here's what's new in Patch Management 1.5.4!

[View Granular Statuses for a Job](#)

**Qualys 1.5.4 brings you more improvements and updates!** [Learn more](#)

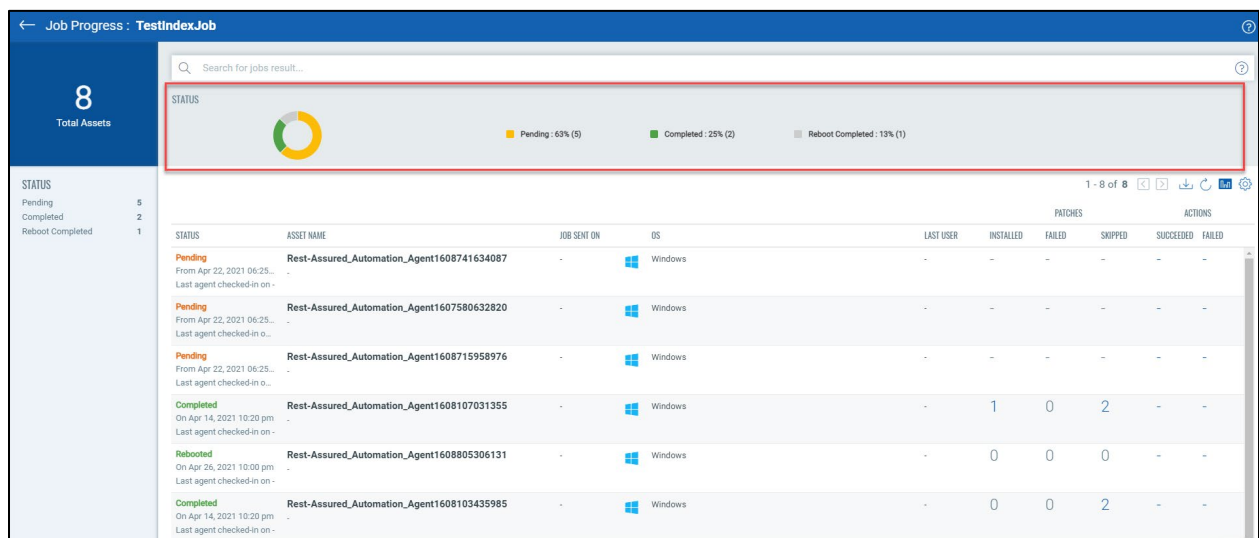

# View Granular Statuses for a Job

With this release, you can view more detailed job status details.

You can also view a pie-chart that shows the percentage-wise breakup of all asset statuses and select one or more statuses to filter assets.

Simply open the View Details quick action for a job. To filter results, click on a status in the pie chart.

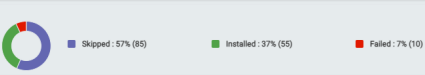

To view the patch status for an asset, select an asset, and from the Quick Action menu, select View Patch Details.

Skipped	Remove specific prevalent malware with Windows Malicious Software Removal Tool	Superseded patch	MSRT21-04	OS	-	None

## Issues Addressed

- We fixed an issue where the asset results returned for a widget created using QQL, and the asset details returned for the same QQL on the Assets tab did not match.
- We fixed an issue where if you clicked the missing patches for assets on the Patches tab, the details on the Assets tab did not show accurate asset details.
- We fixed an issue where if the Last Checked-In Time for an asset was null, an incorrect value was shown in the downloaded report instead of a blank value.
- We fixed an issue where if you wanted to add co-authors for a job from the list of more than 50 users, you had to add the first 50 users to view the rest of the users.
- We fixed an issue where you could not view the asset details from the Job Details section.
- We fixed an issue where the monthly recurring job sometimes was not triggered for execution at the desired time.
