

# Qualys Unified Dashboard v1.x

## Release Notes

Version 1.6

June 1, 2023

### What's New

[Count as Percentage for Pie Widget](#)

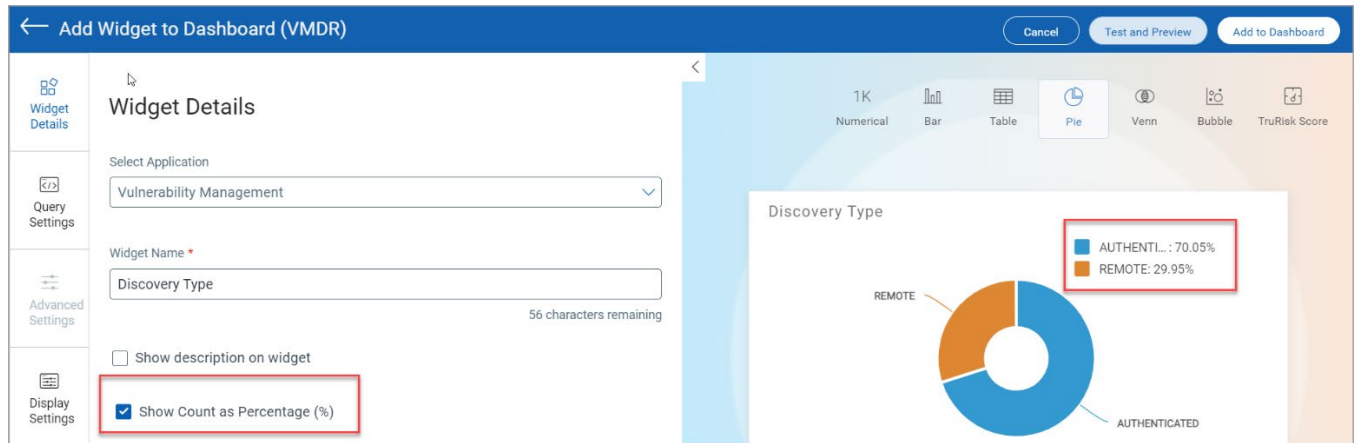

[Enhancement in TruRisk Score Widget](#)

Qualys Unified Dashboard 1.6 brings you many more improvements and updates! [Learn more](#)

## Count as Percentage for Pie Widget

With this release, we have added an option **Show Count as Percentage (%)** option in the Pie Widget. Using this option, you can toggle the Pie widget output values from count to percentage. Optionally, you can enable **Show Legend** and **Show Labels** from the **Display Settings** to label the generated output fields.

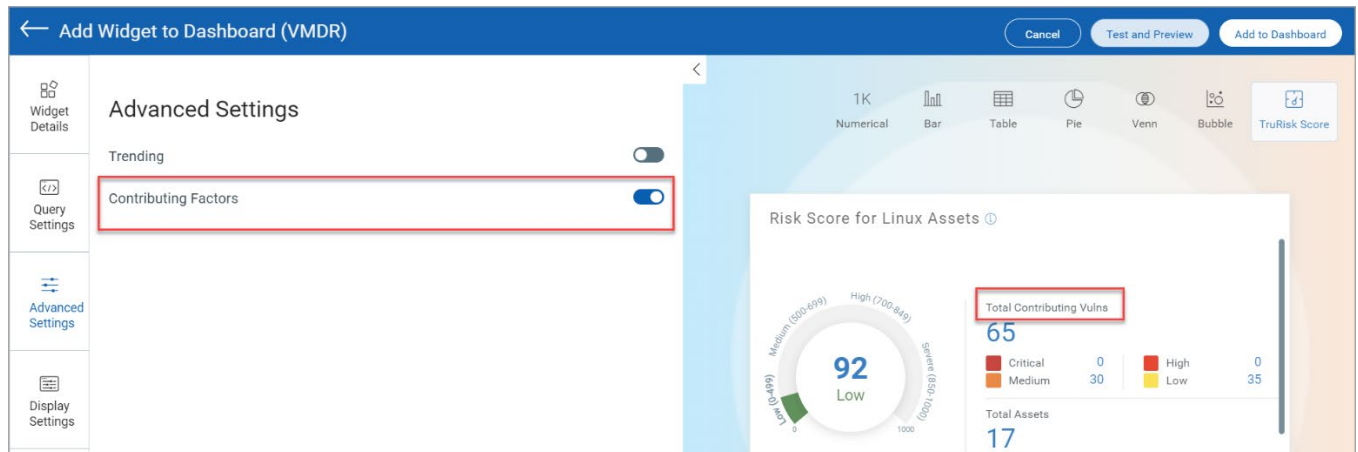

The following screenshot is an example of the Pie Widget with the **Show Count as Percentage (%)** option selected:

## Enhancement in TruRisk Score Widget

We have enhanced the **Display Settings** section in the **TruRisk Score** widget. To simplify your TruRisk search results, the **Contributing Factors** field is now, by default, enabled.

The following screenshot is an example of **Contributing Factor** enabled by default in the **TruRisk Score** widget:

## Issues Addressed

- We have fixed an issue where the user was unable to delete a prioritization widget in dashboards.
- Previously, when the user downloaded the TruRisk Score report, it did not display the dashboard score in color-coded format. This issue is now fixed, and the report is generated in color-coded format.
- We have fixed a syntax error in the QQL token generated after using the Group By field for Detection Age and QDS Range in the Table widget.
