

Qualys Unified Dashboard v1.x

Release Notes

Version 1.7

August 24, 2023

What's New

[Added QDS in Simple List Table Type](#)

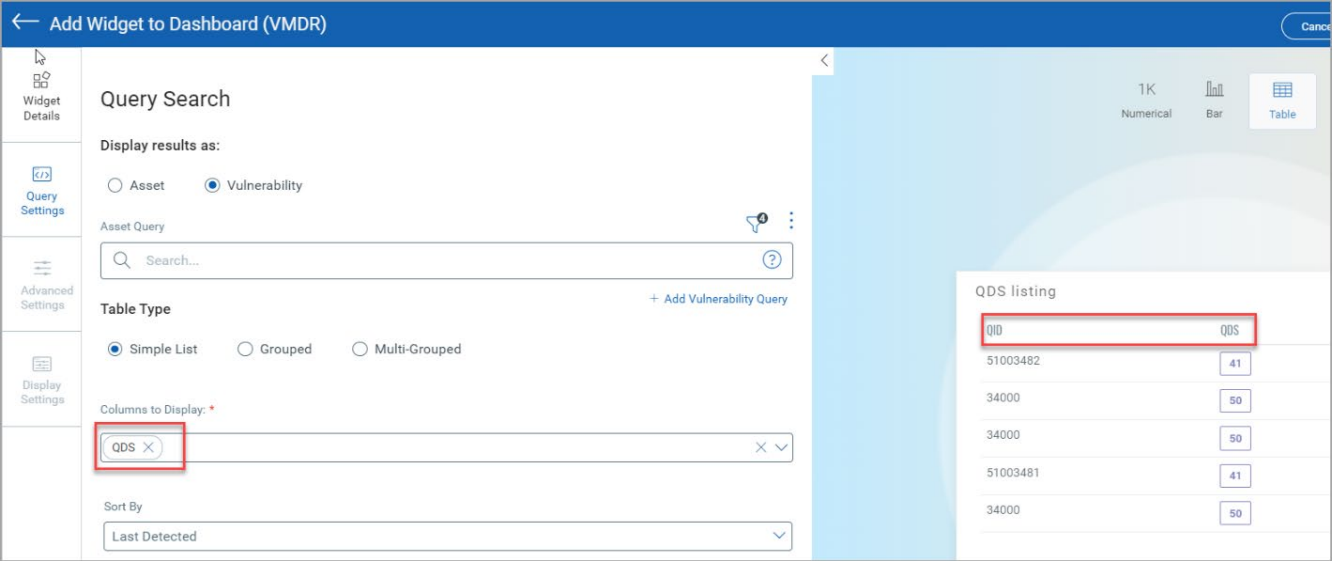

[Enhanced Dashboard Reports](#)

Qualys Unified Dashboard 1.7 brings you many more improvements and updates! [Learn more](#)

Added QDS in Simple List Table Type

We have added **QDS** in the **Columns to Display** field for the **Simple List Table**. This option is included only for VMDR application. By default, the QDS sorting is based on the **Last Detected** option. QDS listing is paired with its respective QID in the output.

The following screenshot is an example of the QDS selection:

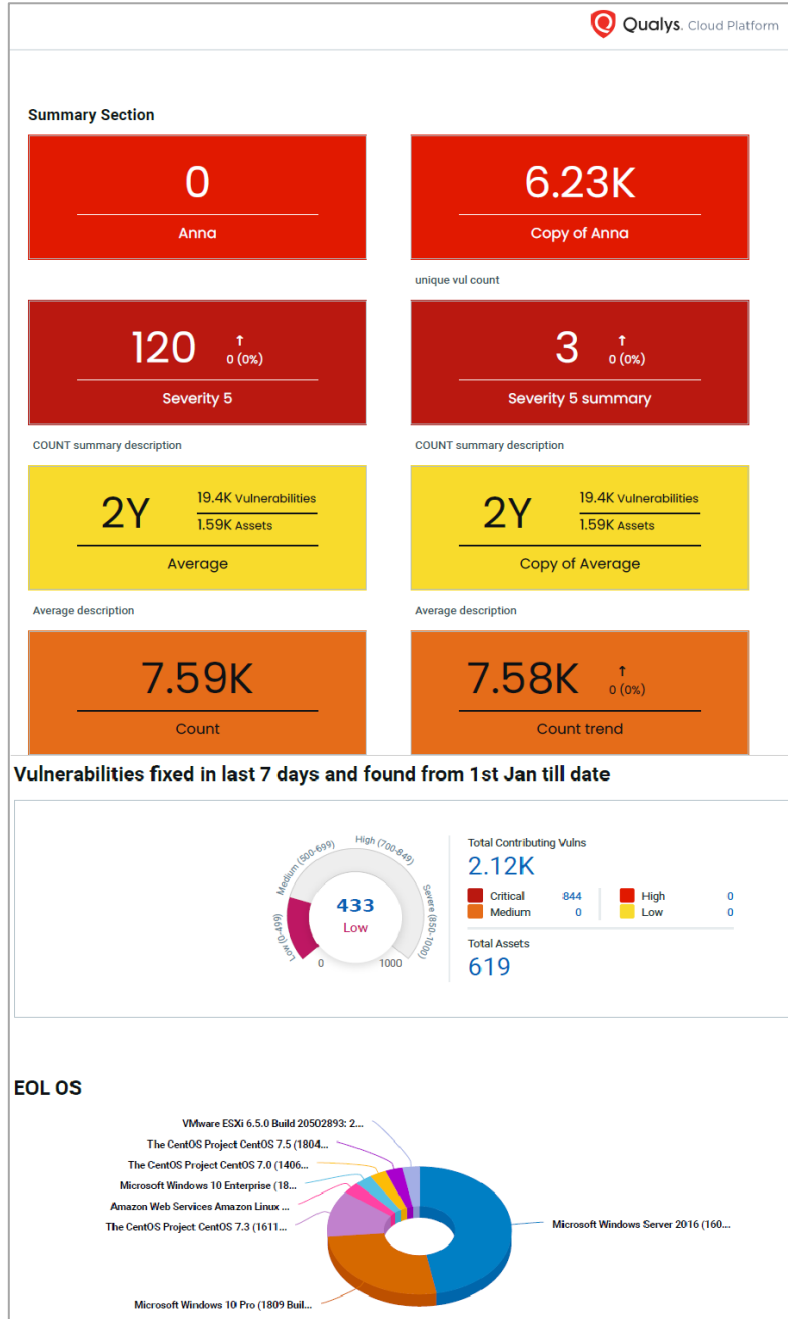

Enhanced Dashboard Reports

With this release, we have enhanced the visual representation of the Dashboard reports generated in PDF format. We have made the following enhancements:

- 3D view output for Pie and Bar widgets
- Summarized and color-coded output for trending
- Summarized TruRisk Score Summary along with Total Contributing Vulnerabilities description.

The screenshot is an example of the Sample Dashboard Report:

Issues Addressed

- We have fixed an issue where the Simple Table function type did not display its data in the Dashboard report.
- Previously, when the user added a tag on multiple dashboards and switched between the dashboards, the tag would not be persistent on the dashboard. Also, the widgets did not display the tag information if the tag was listed on the dashboard. We have fixed this issue. The user can now add tags to the multiple dashboards while the tag is persistent, and the widgets display the information basis the tag added.
