

Qualys VMDR Mobile/Secure Enterprise Mobility (SEM)

Release Notes

Version 1.5.0

July 26, 2022

Here's what's new in VMDR Mobile (previously SEM) 1.5.0!

[Rebranding Secure Enterprise Mobility \(SEM\) to VMDR Mobile](#)

[Introducing Unified Dashboard in VMDR Mobile](#)

Rebranding Secure Enterprise Mobility (SEM) to VMDR Mobile

Earlier known as Secure Enterprise Mobility (SEM) is now rebranded as VMDR Mobile.

SEM is already a part of VMDR, and it helps to extend VMDR to enterprise Mobile Devices hence rebranding it as VMDR Mobile from now onwards to define it as an additional assessment of VMDR explicitly.

Introducing Unified Dashboard in VMDR Mobile

We have introduced the Unified Dashboard (UD) support in VMDR Mobile to enrich your dashboarding experience. Unified Dashboard (UD) brings information from all Qualys applications into a single place for visualization. UD provides a robust new dashboarding framework along with platform service that will be consumed and used by all other products to enhance the existing dashboard capabilities.

Now you can create VMDR Mobile widgets into other Qualys applications to get a unified view of all types of assets in a single dashboard.

You can use dashboards to convey relevant information to any audience at any time and place. The dashboards can be customized and shared with their intended end-users.

UD provides greater agility and enriches the capabilities of dashboards. You can visualize data from other applications in a central place and get a better understanding of your data. You can use widget builder and improvise dashboards to make it uniform across all products.

Benefits:

- Powerful platform to enhance your dashboards
- Capability to pull information from all Qualys applications
- Central place to visualize your data from different Qualys applications
- Enhanced widget builder capabilities for uniform widgets across all applications
