Vulnerability Detection: Enhanced Asset Details

In the **Detection Summary** tab of the **Vulnerability Details** page, you can now see the following additional details for the vulnerable asset:

- Equipment Class
- Equipment Category
- Manufacturer
- Product
- Model
- Firmware Version
- Rack/Slot

New Search Tokens for Better Queries in Assets Tab

You now have the following new search tokens in the **Assets** tab to enhance your search results:

Token	Usage	Description
asset.hasAddOn	<code>asset.hasAddOns: true</code>	Searches a list of all assets with add-on components.
asset.hasModules	<code>asset.hasModules: true</code>	Searches assets that have any rack/slot modules.

Out of Band Configuration Assessment: Support for New Project Files

VMDR OT now supports new project files for the Out of Band Configuration Assessment. You can enhance your inventory by importing project files with the following extensions:

- Siemens LOGO! Soft Comfort lnp and mnp files
- Beckhoff TwinCAT3 zip and tzip file files
- Schneider TwidoSuite zip and xtwd files
- Schneider Concept ccf and CCF files
- GE Fanuc Proficy Machine Edition zip and SwxCF files

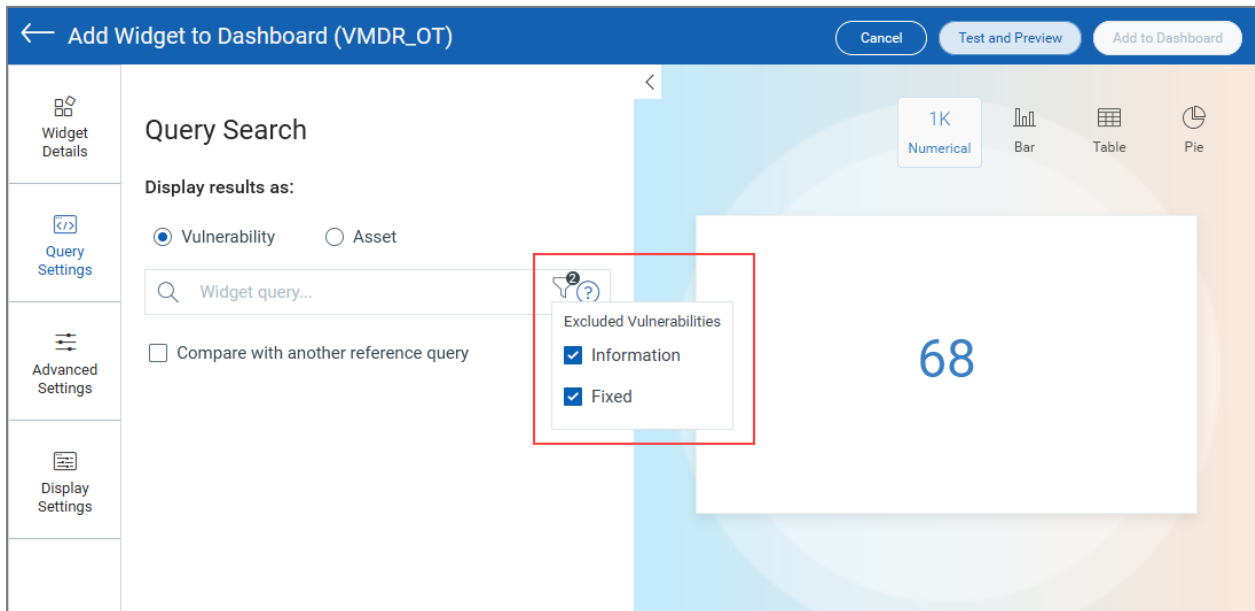

- Emerson DeltaV Explorer fhx file
- Red Lion Controls Crimson cd3 and cd31 files
- Siemens PRONETA xml file

For more information, see [Generating a Project File for VMDR OT](#).

New Filters for Vulnerability Widget Creation

While adding a new widget for vulnerabilities to a dashboard, you can now exclude vulnerabilities using the following two new filters:

- **Information:** excludes the information type vulnerabilities.
- **Fixed:** excludes vulnerabilities that are fixed.

Introducing New APIs

You now have the following two new APIs:

- **List OT Host Asset API**
Use this API to get a detailed consolidated view of your industrial assets. The real-time asset inventory retrieved by this API provides you with the details related to the asset metadata.
- **List OT Vulnerabilities API**
Use this API to get a complete view of the vulnerability posture of the assets in your industrial network.
For more details on these APIs, see [Qualys VMDR OT API user guide](#).
