

# Vulnerability Analysis Plugin for Bamboo

## Release Notes

Version 1.6.0.0

July 16, 2019

Here's what's new in the Vulnerability Analysis Plugin for Bamboo!

### Evaluate docker image for CVSS scores

You can now provide CVSSv2 or CVSSv3 base scores as criteria to fail a docker image build. The build will be evaluated against the CVSS scores and will fail if vulnerabilities are found with CVSS scores greater than or equal to the specified score.

**Fail build if CVSS score(more than configured) found**

The build will fail if vulnerabilities falling under CVSS base score greater than or equal to the configured score.

For more information on configuring the Bamboo plugin see [Vulnerability Analysis Plugin for Bamboo Guide](#).

### Test Connection API

The test connection API used to check Bamboo Plugin connectivity to Qualys has been updated.
