

Vulnerability Analysis Plugin for Jenkins

Release Notes

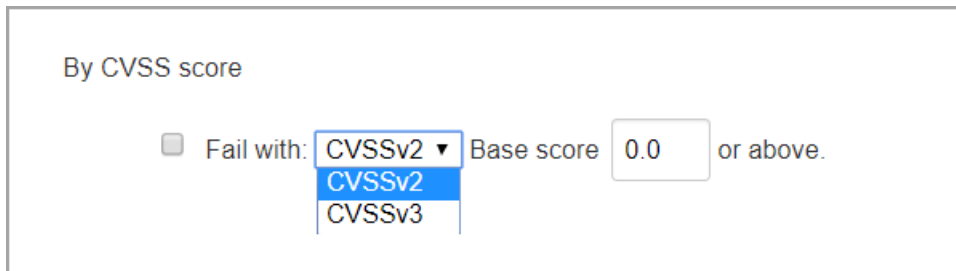

Version 1.6.0.0

July 16, 2019

Here's what's new in the Vulnerability Analysis Plugin for Jenkins!

Evaluate docker image for CVSS scores

You can now provide CVSSv2 or CVSSv3 base scores as criteria to fail a docker image build. The build will be evaluated against the CVSS scores and will fail if vulnerabilities are found with CVSS scores greater than or equal to the specified score.

By CVSS score

Fail with: CVSSv2 ▾ Base score 0.0 or above.

CVSSv2

CVSSv3

For more information on configuring the Jenkins plugin see [Vulnerability Analysis Plugin for Jenkins Guide](#).

Test Connection API

The test connection API used to check Jenkins Plugin connectivity to Qualys has been updated.
