WEB APPLICATION SCANNING

Continuously discover, catalog and scan web apps for vulnerabilities and website misconfigurations

Qualys Web Application Scanning (WAS) is a cloud-based service that provides automated crawling and testing of custom web applications to identify vulnerabilities including cross-site scripting (XSS) and SQL injection. The automated service enables regular testing that produces consistent results, reduces false positives, and easily scales to secure a large number of websites. It proactively scans websites for malware infections, sending alerts to website owners to help prevent black listing and brand reputation damage.

Built on the world’s leading cloud-based security and compliance platform, Qualys WAS frees you from the substantial cost, resource and deployment issues associated with traditional software products. Known for its fast deployment, ease of use, and unparalleled scalability (scan thousands of web applications), Qualys WAS is relied upon by leading companies around the world.

Datasheet: Qualys Web Application Scanning
Benefits:

Scale, cut costs and get better results with an automated cloud-based solution.

Integrates with software development lifecycle allowing scans at any time by developers, QA and security teams with full visibility on web app security.

Find hidden malware with included Qualys MD.

Data Sheet: Qualys Web Application Scanning

Key Features:

**Scale – Global Scalability and Manageability**
As part of the award-winning Qualys Cloud Platform, Qualys WAS helps you truly reduce risk by automatically finding the official and “unofficial” applications that may be hiding in your environment.

- Immediate deployment – no hardware to set up, always up to date.
- Global scalability – add more applications anytime, throughout the world.
- Multiple, unified solutions – one console for WAS, WAF, VM and more.
- Centralized management – apply policies consistently across applications.
- XML APIs – publish data to other enterprise systems (e.g., SiEM).

**Discover – Automated, Dynamic Deep Scanning**
Quickly get visibility on vulnerabilities in your web applications with the industry-leading scanning solution.

- Application discovery and cataloging – find new and unknown web applications in your network.
- Customizable asset tagging – organize your data and reports with your own labels.

**Assess – Scan Apps Everywhere, Accurately and Efficiently**
Scanning covers all applications on your perimeter and internal networks, remote or mobile devices, and in EC2 and Azure elastic cloud environments.

- Scalable, high-accuracy progressive scanning saves time, keeps focus on what matters most.
- Authenticated scanning to automatically log in to test like a real user.
- Supports Selenium to enable complex authentication or workflow sequences for better scan coverage.
- MultiScan, scheduled and on-demand scanning provides scalable scans exactly when you want them.
- Malware detection finds hidden malware before it attacks your users.
- Incorporated penetration testing data keeps web application testing data in one place for integrated analysis.
